

EXHIBIT 12

Page #1, Waiver Request of Section 74.1204

New-T, Payette, ID, Channel 273 50 Watts
Calvary Chapel of Twin Falls, Inc. 7/03

The proposed site is contained entirely inside the service contour of second-adjacent station KJHY, Emmett, ID

KJHY

The proposed site is contained entirely inside the service contour of second-adjacent Station KJHY, Channel 270, Class C, 57kW, Emmett, ID. As shown by the map on **page #2** of this waiver request, the level of the least contour of second -adjacent station KJHY, which is the FM Booster, arriving protected F(50,50) signal at the proposed transmitter site is 67-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KJHY is 107-dBu (free-space contour method employed). This means that the 107-dBu interfering signal would, in the worst case at the maximum radial, extend 226 meters, or .226km from the base of the tower. A 7.5 min Topo Map is being supplied, with a 250 meter, or .25km interference circle, to show that there are no buildings, businesses, residences or roads within this interference area. Since no population inhabits this 107-dBu interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station KJHY.
