

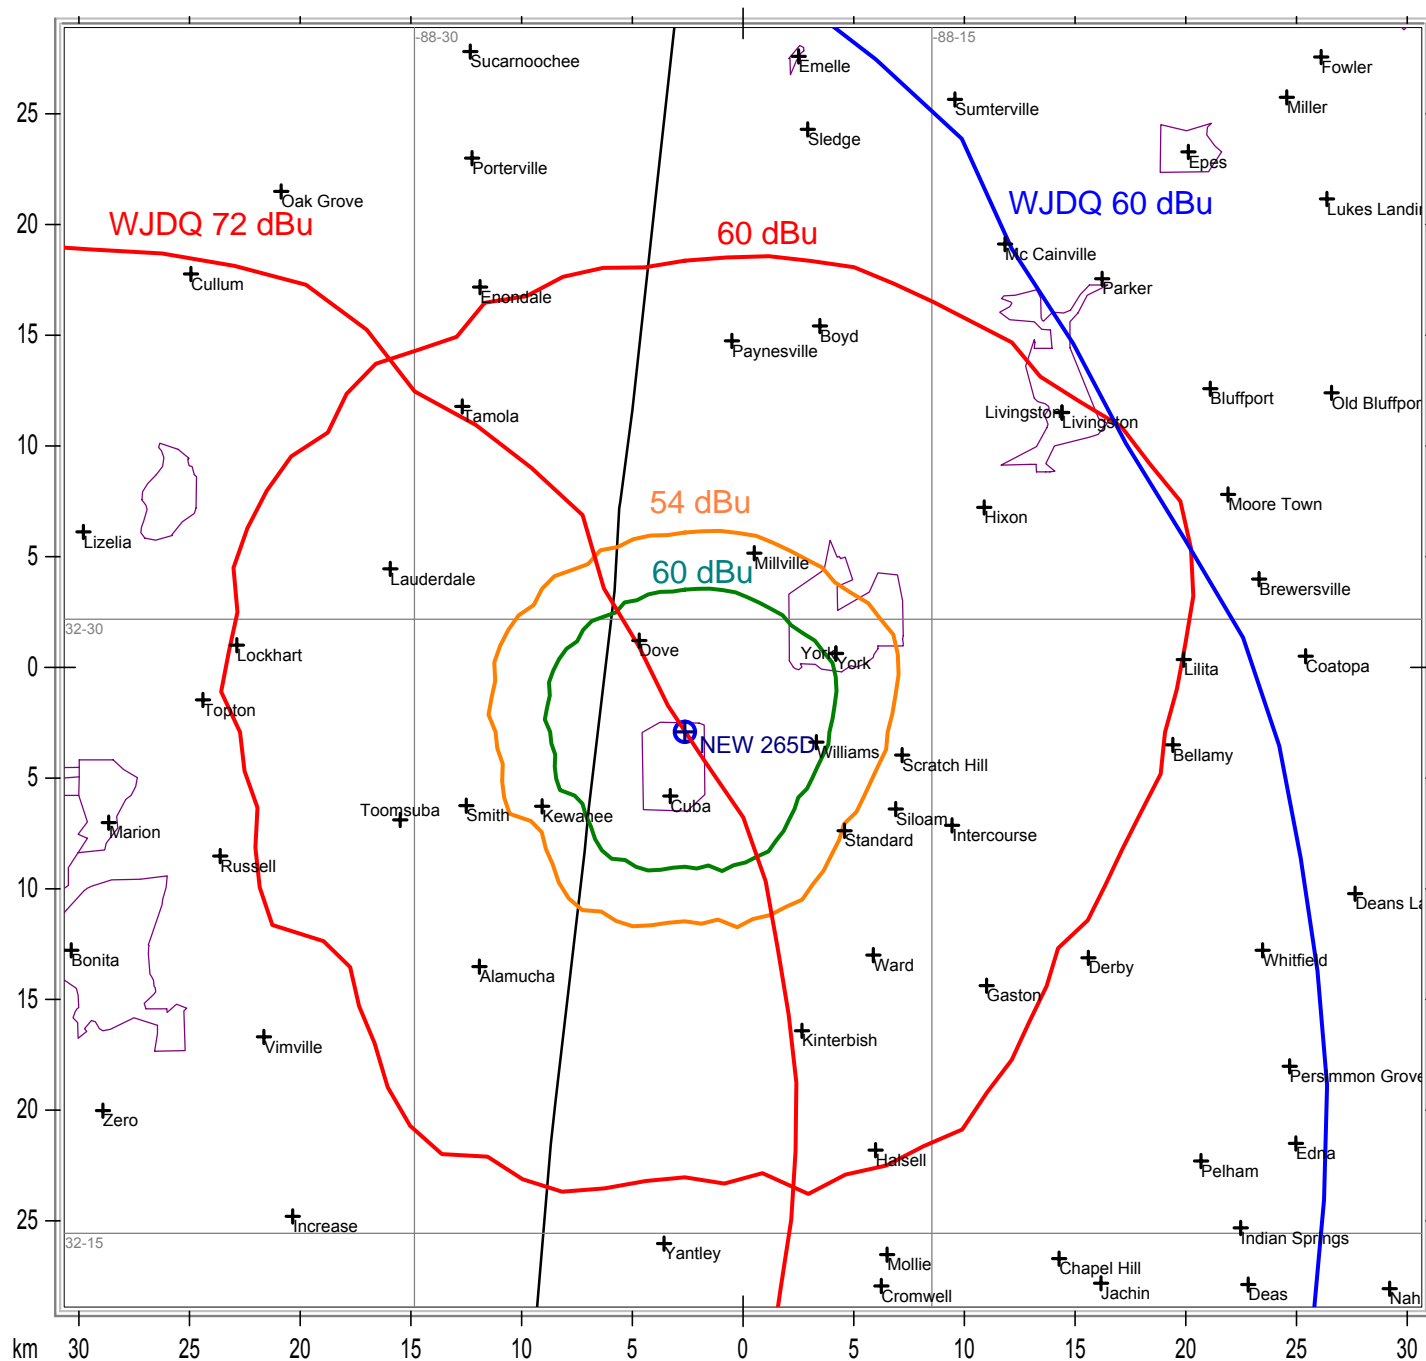

**Exhibit 11**  
**Edgewater Broadcasting, Inc.**  
**Interference 2nd Adjacent WJDQ**  
**York, Alabama**

The Proposed translator is within the 60 dBu contour of upper second adjacent station WJDQ, channel 267. The WJDQ contour at the translator site is 72 dBu (F50,50).

Using the ratio of 100:1 (translator to WJDQ) the population within the proposed translator 112 dBu contour is zero. Using the free space equation, the predicted interference is expected to extend 64 meters from the translator antenna. The antenna is 98 meters above ground level thus the interference area will never reach the ground. Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
