

**Interference Study**

The proposed translator complies with all requirements of Section 74.1204 of the Commission's rules.

The information contained in this amended Exhibit includes the following corrections:

Site coordinates	from	31-54-49 / 83-38-35	to	31-54-49 / 83-38-33
Site elevation	from	128 meters	to	129 meters
Tower height AGL	from	98 meters	to	93 meters
Antenna COR AGL	from	46 meters	to	45 meters

These corrections were necessary in order for the site information contained in the proposed translator application to match the FCC Tower Registration #1003892 information. Since the site elevation is being corrected by 1 meter, the antenna COR AGL is also being adjusted by 1 meter to maintain the antenna COR AMSL of 174 meters.

Page 2 contains an amended Allocation Study. The site coordinates correction of 53 meters does not affect the proposed translator's relationship to other broadcast facilities.

Page 3 contains an amended tabulation of the 12 radials with HAAT's and 60 dBu contour distances. The site coordinates correction of 53 meters slightly adjusts some of the HAAT's by .1 meter, which does not change the average HAAT of 63 meters or 60 dBu contour distances.

Page 4 contains a map of the proposed 60 dBu coverage, which is not significantly affected by the site coordinates correction of 53 meters.
