

**EXHIBIT 27**  
**TECHNICAL STATEMENT**  
**KXNZ, WHEELER, TEXAS**

FCC FORM 301  
May, 2017

This Technical Statement is in support of the minor change application for KXNZ (FM) Channel 280A, Wheeler, Texas, which proposes a channel substitution to change to non-adjacent Channel 255A.

Per MB Docket No. 05-210, RM-10960 Paragraph 16, existing licensees are permitted to request Rule Making Proposals and Allotment Petitions as a part of the electronic FCC Form 301 filing process, with the requested "*channel substitutions for authorized facilities being treated as "minor" changes*". This instant application requests a substitution of Channel 255A for Channel 280A in Wheeler, Texas for station KXNZ (FM), at the currently authorized location and operational parameters of the station. No technical changes are being requested herein apart from the operating channel of the station.

The channel spacing study for KXNZ (FM) has been conducted at the authorized transmitter site and is depicted in the map attached in Exhibit #30, and that location is also proposed to serve as the allotment point for Channel 255A for Wheeler, Texas. The new proposed site and allotment point meet all of the spacing requirements under 73.207 of the commission rules. There are no major obstacles between the proposed allotment coordinates and any portion of Wheeler, Texas, and the entire populated area of Wheeler is well within 16 km of the coordinates as well as the current and proposed 70dBu (50,50) contour.
