

TECHNICAL STATEMENT  
APPLICATION FOR LICENSE  
RADIO STATION K295BN  
LAKE HAVASU CITY, ARIZONA

Technical Statement

FM Translator K295BN is requesting a station license for the facility authorized by construction permit BPFT-20090810ACX.

Special Conditions

It is believed that K295BN is not required to perform the spurious emissions measurement special condition. This is because K295BN is employing its own separate antenna system and is not diplexed with any other FM translator. Furthermore, the FM translator that triggered this special condition, K246AE (FCC Construction Permit: BPFT-20090323ADN), since it has the same antenna radiation center and transmitter site geographic coordinates is actually not a concern since (1) K246AE has not yet constructed its authorized facility, (2) will employ a different antenna than K295BN and (3) will not be co-located on the K295BN but on an adjacent tower.
