Modification to BMPFT-20070207ABX  
Facility ID 20702***

***Exhibit 16  
MAY 2007***

**Environmental Impact & RF Radiation Compliance Statement**

FM translator W283BC is located at an existing communications site that is in compliance with all requirements of Section 1.1307 of the Commission's rules.

The proposed modification specifies a change in channel only, from CH 283 to CH 282. W283BC operates with a maximum ERP of .010 kW (Vertical, DA) at a height above ground of 35 meters. The rf radiation, for a worst case situation, at 2 meters above ground level at the base of the tower will be .15% of the general population/uncontrolled MPE limit. As this is less than 5% of the occupational/controlled MPE limit (.03%), W283BC meets the criteria of Section 1.1307(b)(3) of the Commission's rules in that it is categorically excluded from considering other rf sources at the site.

RF radiation hazard signs are posted at the site. The Applicant certifies that in cooperation with other users of the site, all authorized personnel will be protected from rf exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations, and information pertaining to the contact representative of the facility will be posted.
