

**Introduction and Description of Proposal**

This engineering exhibit was prepared in support of a minor change application being filed by Covenant Network, permittee of FM Translator W258CJ, Peoria, Illinois (FCC Facility ID 151670). It is proposed to move W258CJ to Grand Rapids, Michigan, change channel to 252D, and change the ERP, HAAT and primary station under the provisions of the Class C/D filing window in the "Revitalization of the AM Radio Service", MM docket 13-245.

**Filing Window Eligibility**

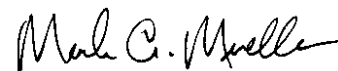

The primary station, WVHF, Kentwood, Michigan (FCC Facility ID 41667) is a class-D AM eligible for the January 29, 2016 window. The proposed transmitter site is an existing TV tower 248.3 miles from the authorized W258CJ site, within the 250 mile limit, and less than 25 miles from the WVHF site. The proposed 60 dBu contour is contained completely within a 25 mile radius of WVHF, and within the WVHF 2 mV/m daytime service contour as shown on attached Exhibit 10.

**Second-Adjacent Channel Waiver Request**

The proposed site is within the 60 dBu contour of two second-adjacent channel stations WGRD-FM (250B, FCC Facility ID 55650) and WFGR (254A, Facility ID 25837). At no point does the proposed field intensity exceed +40 dB of the WGRD-FM or WFGR field intensity over a populated area. Therefore it is respectfully suggested that the proposed facility complies with the conditions of §74.1204(d) due to lack of population, as shown on attached Exhibit 12.

This engineering exhibit was prepared by me and is true and correct to the best of my knowledge and belief.
