Both WKHL and the Kaspar translator are second adjacent to the proposed facility. WKHL is the weaker of the two facilities, so protecting it is sufficient to protect Kaspar. It puts a 72.94 dBu F(50,50) signal at the proposed transmit site. This means the associated interfering signal is 112.94 dBu. At 3 watts, that signal goes 27 meters from the antenna (see attachment). The antenna is 51 meters from the ground, so the interference does not reach the ground. The aerial photo shows that there are no nearby buildings that could reach up 24 meters to the area of interference. Note that there is no incoming interference from Kaspar (see map).
