

EXHIBIT 32  
ENVIRONMENTAL COMPLIANCE  
KLMI ROCK RIVER, WYOMING 291C2  
GREELEY BROADCASTING CORPORATION  
FCC FORM 301  
NOVEMBER 2010

The applicant proposes mounting a new antenna on an existing tower, ASR 1215021. The proposed Center of Radiation will be 21 meters Above Ground Level. The proposed facility will utilize a Nicom, model BKG77/8, 8 bay, 3/4 wavelength spaced, circularly polarized nondirectional antenna. Calculations were made using FM Model for Windows, version 2.10. FM Model using the "Dipole" or EPA type 1 as the antenna type predicts a peak exposure of  $125.808 \text{ W/cm}^2$  at a distance of 8 meters from the base of the tower. This represents less than 63% of the allowable Maximum Permissible Exposure (MPE) of  $200 \text{ W/cm}^2$  for uncontrolled environments at any point on the ground.

The applicant will ensure that the public access to the tower is restricted by fencing, anti-climb devices or other appropriate measures. The site will be posted with RF warning signs. If climbing of the tower by authorized personnel becomes necessary, transmitter power will be reduced to safe operating levels or transmission will be terminated, if necessary, as not to exceed the RF exposure limits to tower workers. The licensee will cooperate with other users at the site with the scheduling of such tower or antenna maintenance.

No modification of the existing tower is proposed, other than the proposed side mounting of the antenna system and addition of a transmission line. The National Programmatic Agreement generally allows such a collocation without consultation or review

under Section 106 and Subpart B of 36 CFR §800. The applicant believes that it is in full compliance with the Agreement, and that no further study is required.
