Re: Azimuth Certification

Dear Sir:

We have measured the lower limb of the existing tower guy, reported to have an azimuth of 28 degrees, and have found it to bear 28 degrees, 48 minutes, 18 seconds, True. This value is based on multiple solar observations from the scaled position of 32 degrees, 46.04 minutes North latitude and 83 degrees, 33.16 minutes West longitude.

Upon this basis, we have observed the Model 6810 FM antenna installed at the referenced site and have determined that it is aimed on an azimuth of 118 degrees, True.

We trust that this information is fully responsive to your request. Should you require additional information or clarification of any point, please call.

Thank you for the opportunity to be of service,

Garland Robert Hardwick, L.S.
