

**Exhibit E-30**

The proposed facility should be exempt from environmental processing as it would utilize an existing site, for which there would be no additional environmental impact, and would not constitute an RF radiation exposure to humans at the site. The tower which would be utilized by the proposed facility was previously registered with the Commission, however that registration was canceled. The tower does not require registration.

The proposed facility would operate with an antenna height of 42.6 meters above ground level. It is proposed that an ERI type antenna of 3 bays and full wavelength spaced be utilized for this facility. The Commission's FM model software package indicates that based on this configuration, the maximum predicted power density at ground level would be  $25.5 \mu\text{W}/\text{cm}^2$  at a distance from the tower of 20 meters. Since this predicted power density is less than  $200 \mu\text{W}/\text{cm}^2$ , it is apparent that the proposed facility would not constitute an RF radiation exposure hazard to persons at the site.
