

ENVIRONMENTAL IMPACT STATEMENT

Operation of KTBY-DT as identified in the instant application will not have a significant impact as defined by 47 CFR 1.1307, since **NONE** of the following facility changes are proposed:

- (1) Facilities that are to be located in an officially designated wilderness area.
- (2) Facilities that are to be located in an officially designated wildlife preserve.
- (3) Facilities that: (i) May affect listed threatened or endangered species or designated critical habitats; or (ii) are likely to jeopardize the continued existence of any proposed endangered or threatened species or likely to result in the destruction or adverse modification of proposed critical habitats, as determined by the Secretary of the Interior pursuant to the Endangered Species Act of 1973.
- (4) Facilities that may affect districts, sites, buildings, structures or objects, significant in American history, architecture, archeology, engineering or culture, that are listed, or are eligible for listing, in the National Register of Historic Places. (See 16 USC 470w(5); 36 CFR Parts 60 and 800.)
- (5) Facilities that may affect Indian religious sites.
- (6) Facilities to be located in a flood plain. (See Executive Order 11988.)
- (7) Facilities whose construction will involve significant change in surface features (e.g., wetland fill, deforestation or water diversion). (In the case of wetlands on Federal property, see Executive Order 11990.)
- (8) Antenna towers and/or supporting structures that are to be equipped with high intensity white lights which are to be located in residential neighborhoods as defined by the applicable zoning law.

There has been a transmission facility at this location for 30 years. Access to the roof is restricted, and personnel are very familiar with proper precautions. Signage is posted in conspicuous locations to alert those headed toward areas where high RFR levels exist. A sign posted near the roof access hatch instructs workers to telephone the station prior to opening the hatch. When workers are required to work close to, or within the field of the transmitting antenna(s), the transmission power will be turned off. The general public does not have access to the roof area and are therefore not exposed to non-ionizing radiation (RFR).
