

Aprovecho Research Center LPFM & Education

1. Our Educational Program:

Aprovecho Research Center is an educational and research organization. Located at 80574 Hazelton Rd., west of the City of Cottage Grove, Oregon. Aprovecho Research Center offers on site educational programs in Organic gardenining, alterative construction technique, renewable energy systems, community development and sustainable forestry.

People enrolled in programs at the research center participate in classes held at the center as well as off site projects. Aprovecho is fortunate to have a varied and qualified staff to engage and encourage students in developing creative and innovative solutions to many of the diversified challenges that we meet in professions, vocational setting or everyday experience.

Ongoing research in forestry and building technique offers students hand on experience in design, implementation and analysis of current projects.

2. Our Use of the LPFM Station to further the Educational Program:

Operation of a LPFM Broadcast Facility would offer students a greater connection with the community at large as well as an expanded opportunity for the community to access much of the work that is being done here.

The operation of the station would offer students program opportunities for art and expression, access to a larger community dialog as well as a very real experience with responsibility.

As a research institution Aprovecho is intimately concerned with exchanging information with the local community. Gardening tips, practical repairs of an aging water pump, the subjects are many and varied. The development of an LPFM is a practical and timely opportunity to provide the community with the information we have developed as well as providing a conduit in return (ie: The convenience of being able to interact through the station, complimented by the on air component of presence).

In conclusion we hope that as administrators of the liscence process, you will find this application complete and
