

## Exhibit 13B

### 2<sup>nd</sup> & 3<sup>rd</sup> Adjacent Channel Interference Study

This Exhibit shows a map with the 100dBu 50:10 Interference contour of the proposed modification of K284CL. This is the area located within the red circle which has a radius from the site of 1.1Km. Under the provisions of 74.1204(d), if there is no population within the interference contour, then no interference occurs. The author of this study measured no population out to the 84dBu contour which is more than fifteen times greater in area than the 100dBu shown on this map. Since no population will receive interference. All second and third adjacent stations will have no caused interference from this translator.

If a waiver should be required, it is requested in this application.
