

Engineering Affidavit

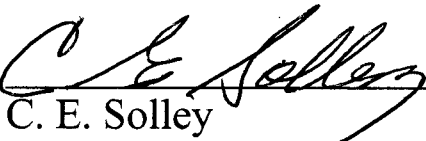

Qualifications of Engineer

I am a broadcast engineer with over 15 years experience. I have been involved in all phases of broadcast facility construction. I have overseen over 100 installations of new antennas and / or towers throughout the United States, and I have personally overseen the installation of several directional antenna systems.

Statement of Directional Antenna Installation at KEZG

Assembly and installation of the Shively 6810-2R-DA two bay antenna serial number 24924 for radio station KEZG, Calico Rock, Arkansas, was carried out under my supervision and was done precisely according to the instructions in the manual supplied by Shively.

I certify that to the best of my knowledge, the antenna placement meets the requirement of the antenna boom heading at an azimuth of 217 degrees true as verified by a local surveyor.
