ENGINEERING TECHNICAL STATEMENT PREPARED BY WILLIAM T. GODFREY OF THE FIRM KESSLER AND GEHMAN ASSOCIATES, INC., TELECOMMUNICATIONS CONSULTING ENGINEERS, IN CONNECTION WITH A MINOR MODIFICATION OF CONSTRUCTION PERMIT APPLICATION TO OPERATE THE VIRGIN ISLANDS PUBLIC TELEVISION SYSTEM'S ("VIPTS") DIGITAL BROADCAST STATION, WTJX-DT CHANNEL 44, AT ITS ALLOTTED EFFECTIVE RADIATED POWER OF 50 KW.

The firm Kessler and Gehman Associates, Inc. was retained by the Virgin Islands Public Television System ("VIPTS"), Charlotte Amalie, USVI to prepare engineering studies and the engineering portion of a minor modification of construction permit application to operate WTJX-DT Channel 44 at its allotted effective radiated power ("ERP") of 50 kW.

Discussion

The VIPTS currently has a CP (BPEDT20000217ABD) to build and operate WTJX-DT on DTV Channel 44 with an ERP of 50 kW at an antenna height radiation center of 21.3 meters above ground level ("AGL") using a Harris model HSEF-8C/SM directional antenna. The initial DTV application for construction permit was filed several years ago when Harris Corporation was still selling broadcast antennas. Obviously, since Harris discontinued selling antennas, the VIPTS was not able to purchase the Harris model HSEF-8C/SM as originally planned and they had to go to a different antenna manufacturer to find an antenna that would meet the Harris specifications as closely as possible. The VIPTS made the decision to go with the Dielectric model TLP-8 S180 directional antenna which has an azimuth pattern very similar to the Harris azimuth pattern but with relative field values exceeding the Harris pattern relative field values in various azimuthal directions.

Since the proposed azimuth pattern's relative field values exceeded the authorized azimuth pattern relative field values in various azimuthal directions, it was determined that the ERP had to be reduced from 50 kW down to 45 kW so that the proposed pattern would be completely encompassed by the authorized pattern. Accordingly, the VIPTS filed a special temporary authorization ("STA") in April 2003 requesting a 5 kW reduction in ERP in order to be in compliance with FCC requirements. The FCC authorized an emergency STA in April 2003 so that WJCT-DT could continue operation at reduced facilities with the Dielectric antenna and the FCC officially granted the STA in May 2003. The FCC prepared a letter, dated May 22, 2003, which stated that the VIPTS met the FCC's May 2003 deadline for the completion of construction of its noncommercial educational DTV facility. The letter also stated that any DTV construction permit issued to the VIPTS would automatically be extended until further notice.

Now that the VIPTS has met the May 2003 deadline by operating with a reduced power facility, they would like to increase the ERP of the WJCT-DT facility back to the allotted 50 kW. It was previously stated that proposed antenna change, with WJCT-DT operating with an ERP of 50 kW, would cause the proposed azimuth pattern's relative field values to slightly exceed the authorized azimuth pattern relative field values in various azimuthal directions. Therefore, to increase the ERP from 45 kW to 50 kW, using the Dielectric TLP-8 S180 antenna, it is necessary to run interference studies to verify that the increased pattern would not cause unacceptable interference to any applicable surrounding stations.

Exhibit 12 is principal community coverage map, using a contour that is 7 dB stronger than the DTV service contour values for Channel 44, to show that the proposed facility would encompass the entire principal community of Charlotte Amalie.

Exhibit 13 is an FCC contour map depicting the authorized F(50,90) 41.5 dBuV/m noise limited contour and the proposed F(50,90) 41.5 dBuV/m noise limited contour. It is not clear that the boundaries of the proposed noise limited contour exceed the boundaries of the authorized noise limited contour in various azimuthal directions but close inspection will show that it does. Exhibits 14 through 16 verify that the authorized azimuth pattern boundaries would be exceeded.

Exhibit 14 contains the authorized facility's distance to contour data (in kilometers) every one degree and Exhibit 15 contains the proposed facility's distance to contour data (in kilometers) every one degree. Exhibit 16 compares the data from Exhibits 14 and 15 and depicts the distance to contour values of the CP facility in column 1 and the distance to contour values of the proposed facility in column 2. Column three contains a simple formula (in each cell) which subtracts column 2 from column 1 and determines whether the proposed noise limited contour is greater than the CP noise limited contour or if the proposed noise limited contour is less than or equal to the CP noise limited contour. If the distance to contour value of the proposed facility is less than or equal to the distance to contour value of the CP facility, the cell will depict the word "PASS" and will have a green background. If the distance to contour value of the proposed facility is greater than the distance to contour value of the CP facility, the cell will depict the word "FAIL" and will have a red background. Exhibit 16 verifies that the proposed facility's noise limited contour would exceed the CP facility's noise limited contour in various azimuthal directions. Therefore, interference studies are required.

Interference Studies

The Longley-Rice interference studies were performed using a Sun Microsystems SPARC 5 computer work station loaded with the FCC's TV Interference and Spacing Analysis software (Exhibit 17) which complies with the FCC mandated application-processing guidelines for digital television. This software is in accordance with the standards established in the FCC Public Notice #3060-0841 pertaining to DTV studies and DTV application preparation dated August 10, 1998.

Spacing violations were found between the following stations:

- WMTJ FAJARDO, PR
- WVEO AGUADILLA, PR
- WIDP-DT GUAYAMA, PR
- WZDE CAROLINA, PR

The interference studies verified that the proposed WTJX-DT Channel 44 station would not cause above de minimis interference to WMTJ, WVEO, WIDP-DT or WZDE.

The proposed facility did not violate the following: 1) FCC Monitoring stations; 2) West Virginia quiet zone; 3) Table Mountain; 4) Canadian mileage spacing; 5) Mexican mileage spacing; or 6) AM broadcast stations.

The W29CB Class A facility's F(50,50) 74.0 dBuV/m service contour is completely encompassed by the proposed WTJX-DT facility's F(50,90) 41.5 dBuV/m noise limited contour (see Exhibit 18). A worst-case, head-on Longley-Rice interference study which calculated predicted interference from the proposed WTJX-DT facility to the licensed W29CB Class A facility, without considering any other applicable surrounding stations (no masking), verified that the licensed W29CB Class A facility would receive no

interference (0.0%) from the proposed WTJX-DT Channel 44 facility (see Exhibit 19). Therefore, in accordance with §73.613(j) of the FCC rules, the VIPTS requests a waiver of the interference protection requirements of §73.613 to make full use of Longley-Rice terrain dependent propagation methods to demonstrate that the proposed facility would not be likely to cause interference to Class A TV stations.

Transmitter Site

The WTJX-DT antenna is a side-mount Dielectric model TLP-8 S180, horizontally polarized, directional, DTV antenna. The tower is registered with the FCC and has a registration number of 1024797. The support structure is located 1.3 miles NW of Charlotte Amalie, USVI. The antenna height radiation center is 21.3 meters above ground level. The overall height of the support structure is 35.1 meters AGL as depicted in the FCC Antenna Structure Registration (“ASR”) and Exhibit 3’s elevation view of the support structure.

Exhibits

Exhibits 1 and 2 represent WTJX-DT’s administration data, antenna and antenna structure specifications

Exhibit 3 depicts the profile view of the proposed antenna on the antenna structure with all the appropriate elevations.

Exhibits 4 and 5 display the azimuth pattern and azimuth pattern tabulation respectively.

Exhibits 6 and 7 display the elevation pattern and Exhibit 8 displays the elevation pattern tabulation.

Exhibits 9 and 10 display the ERP-dBk pattern and tabulation respectively.

Exhibit 11 depicts the location of the WTJX-DT site on a 7.5-Minute (Series) Topographic map.

Exhibit 12 depicts the proposed WTJX-DT noise limited contour, boundaries of the principal community to be served, and the transmitting location with radials every 45°.

Exhibit 13 depicts the WTJX-DT Channel 44 CP noise limited contour and the proposed WTJX-DT Channel 44 noise limited contour.

Exhibit 14 depicts the authorized facility’s distance to contour data every one degree.

Exhibit 15 depicts the proposed facility’s distance to contour data every one degree.

Exhibit 16 compares the data from Exhibits 14 and 15 and shows that the proposed ERP does exceed the authorized ERP in various azimuthal directions, proving that interference studies are required.

Exhibit 17 is a detailed Longley-Rice interference study of proposed WTJX-DT Channel 44 station to all applicable surrounding stations.

Exhibit 18 is a contour map depicting the W29CB Class A facility’s F(50,50) 74.0 dBuV/m service contour and the proposed WTJX-DT facility’s F(50,90) 41.5 dBuV/m noise limited contour to

demonstrate that the Class A facility's contour is completely encompassed by the proposed WTJX-DT facility's contour.

Exhibit 19 is a Longley-Rice interference study to show that the licensed W29CB Class A facility would receive no interference (0.0%) from the proposed WTJX-DT Channel 44 facility. A waiver has been requested to make full use of Longley-Rice terrain dependent propagation methods to demonstrate that the proposed facility would not be likely to cause interference to Class A TV stations. Exhibit 19 demonstrates that the proposed facility would not be likely to cause interference to the W29CB Class A station.

Environmental Impact

The proposed construction will have no significant environmental impact as defined in §1.1307 of the FCC Rules. The DTV transmitter, 2-1/4 inch (50-ohm) transmission line and antenna system will produce an ERP of 50 kW. It was determined that the maximum lobe of radiation from the base of the tower out to 300 feet occurs at approximately 34.9 feet from the base of the tower. At approximately 34.9 feet from the base of the tower, the depression angle of the main lobe is approximately 63.5° below the horizontal. At that point, the relative field is 0.231 and the power density six feet above the ground is 0.235 mW/cm². This is 10.8% of the maximum permissible exposure ("MPE") limits for Occupational/Controlled Exposure and 54.0% of the MPE limits for General Population/Uncontrolled Exposure authorized by the American National Standards Institute ("ANSI"). Since the proposed operation of WTJX-DT Channel 44 will exceed 5.0 percent of the MPE limit for both Occupational/Controlled and General Population/Uncontrolled Exposure within 300 feet of the base of the tower, WTJX-DT is considered to be a "significant contributor" to the RF exposure environment pursuant to OET Bulletin 65, Edition 97-01. Therefore, contributions of exposure from other sources on the WTJX support structure must be accounted for in this analysis. The only other antennas on the WTJX tower are the following: 1) WTJX-TV Channel 12; 2) MDS stations: KNSC531, KNSC532, KNSC535, KNSC536, KNSC537 and WNC892; and 3) WFIG-LP Channel 5.

For WTJX-TV Channel 12, it was determined that the maximum lobe of radiation from the base of the tower out to 300 feet occurs at 300 feet from the base of the tower. At approximately 300 feet from the base of the tower, the depression angle of the main lobe is approximately 19.3° below the horizontal. At that point, the relative field is 0.240 and the power density six feet above the ground is 0.031 mW/cm². This is 3.1% of the MPE limits for Occupational/Controlled Exposure and 15.4% of the MPE limits for General Population/Uncontrolled Exposure authorized by the ANSI. The combined controlled and uncontrolled MPE percentages for the WTJX-DT and WTJX-TV facilities are 13.9% Occupational/Controlled Exposure and 69.4% General Population/Uncontrolled Exposure but we still have to consider the MDS and LPTV antennas on the tower.

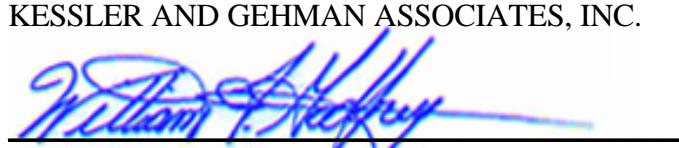

The analog transmitters, transmission line and antenna systems for the KNSC531, KNSC532, KNSC535, KNSC536, KNSC537 and WNC892 MDS antennas produce a maximum EIRP of 129 watts using a total of fifteen channels. Assuming that the maximum radiation for the combined MDS antennas is oriented at the base of the tower, the power density six feet above the ground would be 0.031 mW/cm². This is only 0.61% of the MPE limits for Occupational/Controlled Exposure and 3.1% of the MPE limits for General Population/Uncontrolled Exposure authorized by the ANSI. The combined controlled and uncontrolled MPE percentages for the WTJX-DT, WTJX-TV, and the MDS facilities are 14.5% Occupational/Controlled Exposure and 72.5% General Population/Uncontrolled Exposure but we still have to consider the LPTV antenna on the tower.

The analog transmitter, transmission line and antenna system for the WFIG-LP Channel 5 low power television (“LPTV”) facility produces an ERP of 50 watts. Assuming that the maximum lobe of radiation was oriented toward the base of the tower, it would produce a power density six feet above the ground of 0.005 mW/cm^2 . This is only 0.052% of the MPE limits for Occupational/Controlled Exposure and 0.261% of the MPE limits for General Population/Uncontrolled Exposure authorized by the ANSI. The combined controlled and uncontrolled MPE percentages for all antennas on the tower (WTJX-DT/WTJX-TV/MDS/LPTV) are 14.6% Occupational/Controlled Exposure and 72.8% General Population/Uncontrolled Exposure which are below the maximum permissible exposure threshold for both Occupational/Controlled Exposure and General Population/Uncontrolled Exposure. Therefore, it is safe to conclude that the emissions will be insignificant and well within the maximum allowable requirements.

If other antennas are placed on the tower in the future, the applicant will cooperate with those users by reducing or completely terminating the power to the antenna when maintenance workers are in danger from the electromagnetic radiation emanating from the antenna.

Certification

This technical statement was prepared by William T. Godfrey, Telecommunications Consultant with Kessler and Gehman Associates, Inc. having offices in Gainesville, Florida and has been working in the field of radio and television broadcast consulting since 1998. He graduated from the University of North Florida with a Bachelor of Arts degree in Criminal Justice and a minor in Mathematics in 1993. As a Professional in the field of Telecommunications he states under penalty of perjury that the information contained in this report is true and correct to the best of his knowledge and belief.

WTJX-DT CP Distance to Contour Table:

Transmitter Information:

Call Letters: WTJX-DT CP
File Number: BPEDT20000217ABD
Latitude: 18-21-26 N
Longitude: 064-56-50 W
ERP: 50.00 kW
Channel: 44
Frequency: 653.0 MHz
AMSL Height: 472.4 m
Elevation: 451.1 m
HAAT: 457.9 m
Horiz. Antenna Pattern: Directional

Type of curve: FCC
Location Variability: 50.0 %
Time Variability: 90.0 %
Field Strength: 41.52 dBuV/m

Primary Terrain: V-Soft US 3 Arc-Second Database

WTJX-DT APP Distance to Contour Table:

Transmitter Information:

Call Letters: WTJX-DT APP
Latitude: 18-21-26 N
Longitude: 064-56-50 W
ERP: 50.00 kW
Channel: 44
Frequency: 653.0 MHz
AMSL Height: 472.4 m
Elevation: 451.1 m
HAAT: 457.9 m
Horiz. Antenna Pattern: Directional

Type of curve: FCC
Location Variability: 50.0 %
Time Variability: 90.0 %
Field Strength: 41.52 dBuV/m

Primary Terrain: V-Soft US 3 Arc-Second Database

Bearing (deg)	Distance (km)	HAAT (m)

Total scenarios = 1

Result key: 1

Scenario 1 Affected station 13

Before Analysis

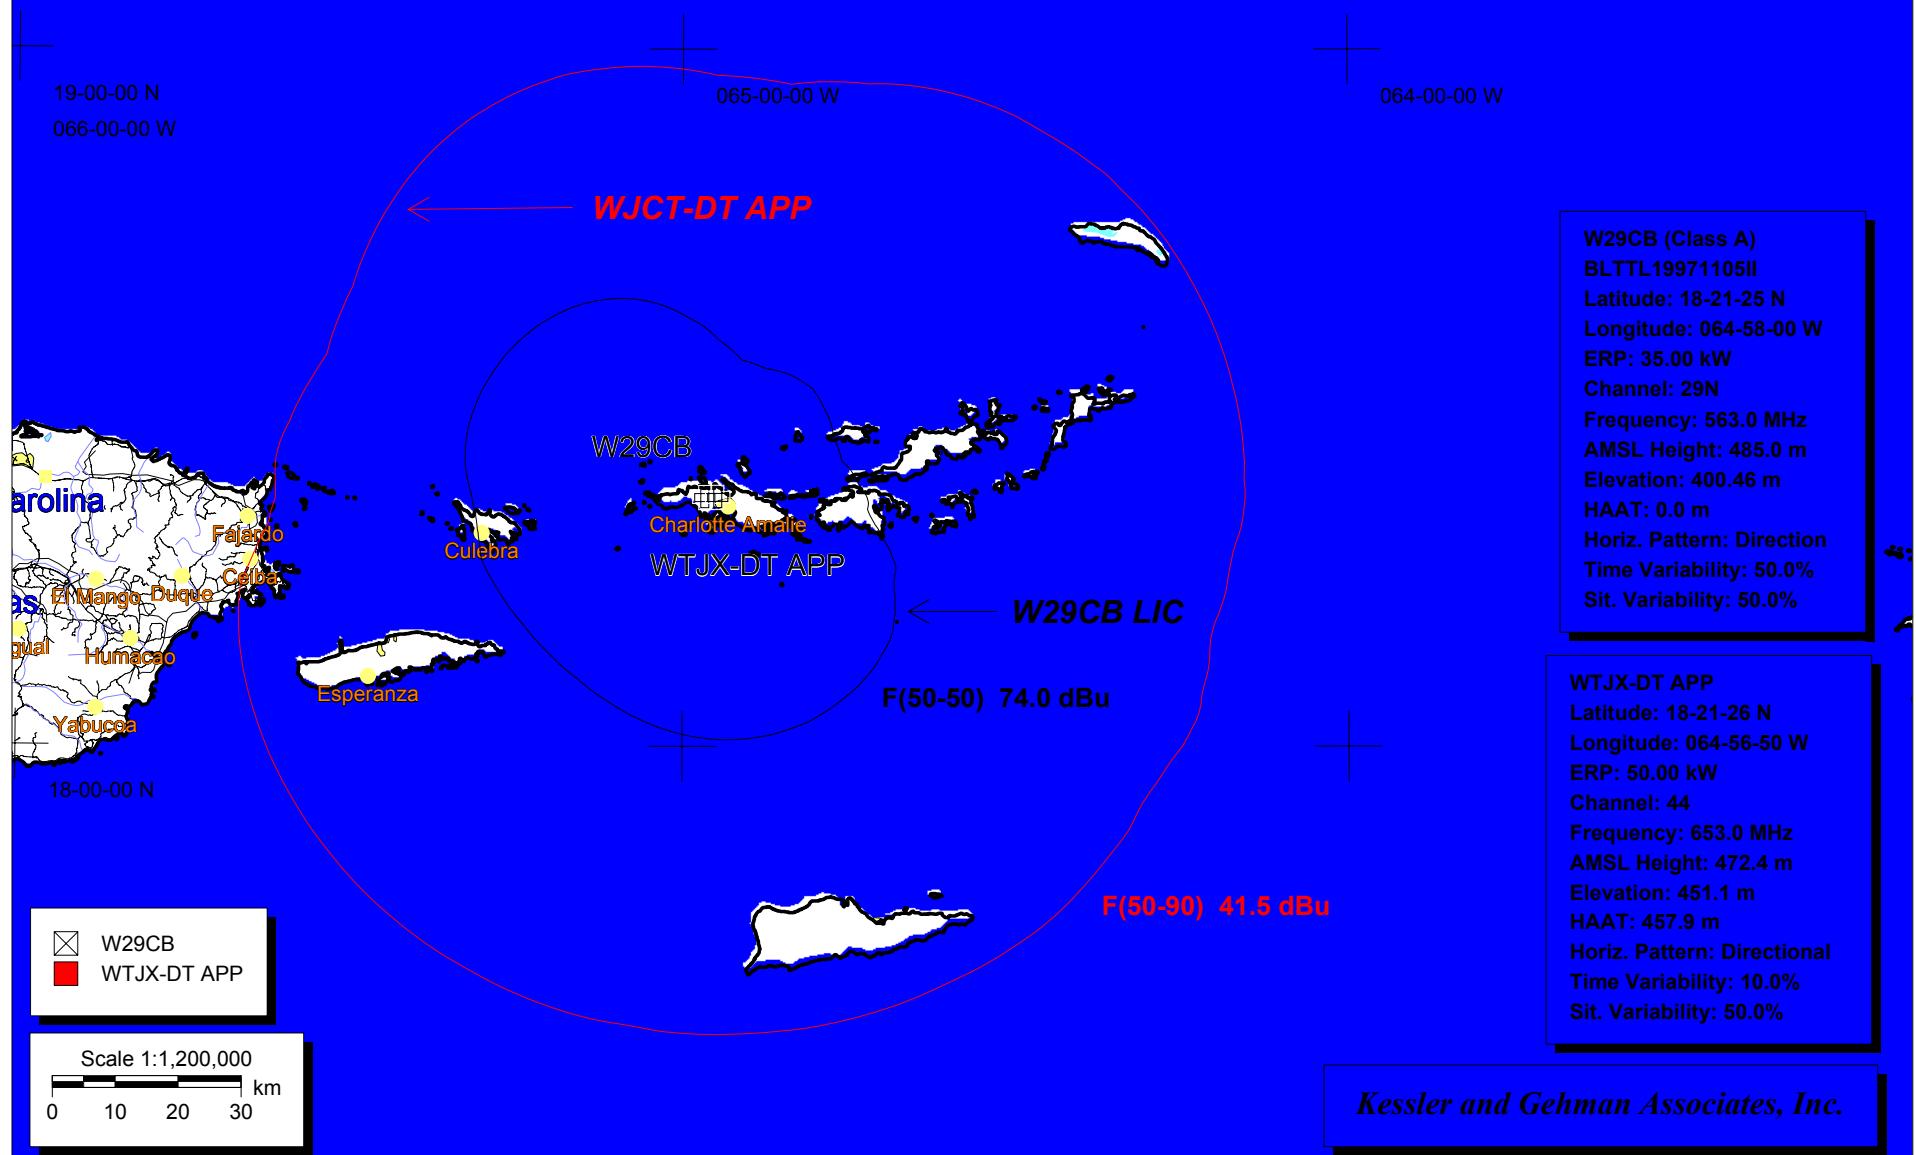

Results for: 44A VI Charlotte Amalie	CUR	PROPOSED	APP
HAAT 457.0 m, ATV ERP 50.0 kW			
	POPULATION	AREA (sq km)	
within Noise Limited Contour	166878	20404.6	
not affected by terrain losses	166878	20288.6	
lost to NTSC IX	0	0.0	
lost to additional IX by ATV	0	0.0	
lost to ATV IX only	0	0.0	
lost to all IX	0	0.0	

Potential Interfering Stations Included in above Scenario 1

*Percent Service lost without proposal:	0.0	to CUR	PROPOSED
*Percent Service lost with proposal:	0.0	to CUR	PROPOSED

FINISHED FINISHED FINISHED FINISHED FINISHED FINISHED

Proposed WTJX-DT Application would cause no interference to the W29CB Class A station

Exhibit 18

CLASS A INTERFERENCE STUDY

W29CB (29N) St. Thomas, VI - BLTTL19971105II
TV Incoming Interference Study
Signal Resolution: 2 km
Consider NTSC Taboo: Yes
of radials computed for contours: 36
Contours calculated using 8 radial HAAT.
LR Profile Spacing Increment: 1.0 km
Interference considered within the reference station's 74 dBu FCC contour.
Using NTSC LPTV/Translators D/U rules.
Threshold for reception: 74.0 dBuV/m

Study Date: 5/30/2003
TV Database Date: 05-30-03

Population Database: 1990 US Census

Stations considered which do not cause interference:

WTJX-DT APP (44)

Call Letters	City	State	Dist	Bear
WTJX-DT APP (44)	Charlotte Amalie	VI	2.1	89.1

Totals for W29CB (29N)

Calculation Area Population:	0 (3499.5 sq. km)
Not Affected by Terrain Loss:	0 (3483.6 sq. km)
Total NTSC Interference:	0 (0.0 sq. km)
DTV Only Interference:	0 (0.0 sq. km)
Total DTV Interference:	0 (0.0 sq. km)
Interfered Population:	0 (0.0 sq. km)
Interference Free:	0 (3483.6 sq. km)

Percent Interference: 0.00

Terrain Blocked Population: 0 (16.0 sq. km)
