

TECHNICAL EXHIBIT  
DIGITAL FLASH-CUT APPLICATION FOR  
TV TRANSLATOR STATION K45EC (FACILITY ID 35563)  
SILVER CITY, NEW MEXICO  
CH 45 1.66 KW

Technical Narrative

This Technical Exhibit supports a flash-cut application for TV translator station K45EC. Station K45EC is licensed (BLTT-19950130JE) to operate on analog channel 45 with a non-directional maximum (visual) effective radiated power (ERP) of 8.29 kW and an antenna height above mean sea level (RCAMSL) of 2322 meters.

Proposed Facilities

This application proposes digital operation on the current channel (45), at the current transmitter site and with the same antenna. The transmitter site coordinates remain (NAD27): 32-50-40 N, 108-14-18 W. A Scala SL-8 non-directional antenna, with a maximum ERP of 1.66 kW and antenna RCAMSL of 2322 meters is proposed.

Figure 1 is a map showing the licensed 74 dBu (analog) and proposed 51 dBu (digital) coverage contours. As can be seen on the map, there is common area where both contours overlap.

Allocation Considerations

A study has been conducted to assure that the proposal will not create prohibited interference with other licensed, authorized or pending analog or digital TV, LPTV/translator and Class A TV stations. Using the procedures outlined in the FCC's OET-

69 Bulletin, a 2 kilometer cell size resolution and 1990 U.S. Census, the proposal complies with the current FCC policy (i.e., less than 0.5% new interference caused to other pertinent assignments). If necessary, a waiver of the FCC rules is respectfully requested based on use of the procedures outlined in the FCC's OET-69 Bulletin to the remaining LPTV/translator stations.

The applicant recognizes the proposal is secondary to authorized full-service analog and DTV operations. The applicant understands that it must correct and/or eliminate prohibited interference that may result from its proposed operation.

**Radiofrequency Electromagnetic Field Exposure**

The K45EC facilities were evaluated in terms of potential radiofrequency radiation exposure at 2 meters above ground level in accordance with OST Bulletin No. 65, "Evaluating Compliance With FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation". This Bulletin provide assistance in determining whether FCC-regulated transmitting facilities, operations or devices comply with limits for human exposure to radiofrequency (RF) electromagnetic fields adopted by the Commission in 1996.<sup>1</sup>

The calculated power density at 2 meters above ground level at the base of the tower was calculated using the appropriate equation contained in the Bulletin. As shown on Figure 1 (antenna vertical relative pattern), the maximum vertical relative field for depression angles towards the tower base (-60° to -90°) is less than 0.3. Therefore, using a vertical relative field value of 0.3, a maximum ERP of 1.66 kilowatts, and an antenna center of radiation height above ground level of 21 meters, the calculated power density at two meters above ground level at the base of the tower is 0.0138 milliwatt per square centimeter (mW/cm<sup>2</sup>), or 3.1 percent of the Commission's recommended limit applicable to general

population/uncontrolled exposure areas ( $0.44 \text{ mW/cm}^2$  for TV channel 45). Therefore, the facility complies with the FCC's RF emission rules.

Access to the transmitting site will be restricted and appropriately marked with warning signs. Furthermore, as this is a multi-user site, an agreement will be in effect to control access to the site. In the event that workers or other authorized personnel enter the restricted area appropriate measures shall be taken to limit RF energy exposure. Such measures include limiting the exposure time, wearing protective clothing, reducing power to an acceptable level or termination of transmitter output power all together until workers leave the restricted area.

If there are questions concerning the technical portion of this application, please contact the office of the undersigned.

## TOWAIR Determination Results

[HELP](#)

[New Search](#)  [Printable Page](#)

A routine check of the coordinates, heights, and structure type you provided indicates that this structure does not require registration.

### \*\*\* NOTICE \*\*\*

TOWAIR's findings are not definitive or binding, and we cannot guarantee that the data in TOWAIR are fully current and accurate. In some instances, TOWAIR may yield results that differ from application of the criteria set out in 47 C.F.R. Section 17.7 and 14 C.F.R. Section 77.13. A positive finding by TOWAIR recommending notification should be given considerable weight. On the other hand, a finding by TOWAIR recommending either for or against notification is not conclusive. It is the responsibility of each ASR participant to exercise due diligence to determine if it must coordinate its structure with the FAA. TOWAIR is only one tool designed to assist ASR participants in exercising this due diligence, and further investigation may be necessary to determine if FAA coordination is appropriate.

### DETERMINATION Results

**PASS SLOPE(100:1): NO FAA REQ-RWY MORE THAN 10499 MTRS & 7954.67 MTRS (7.95469 KM) AWAY**
