

Compliance with Special Operating Conditions

The Construction Permit contains several Special Operating Conditions, summarized as follows:

1. The permittee must provide the results of a complete proof-of-performance to establish the horizontal plane radiation patterns for both the horizontally and vertically polarized radiation components.
 2. The permittee must provide an affidavit from a licensed surveyor to establish that the directional antenna has been oriented at the proper azimuth.
 3. The permittee must submit an affidavit that a qualified engineer oversaw the installation of the directional antenna system.
 4. The permittee must provide a statement that the relative field strength of neither the measured horizontally nor vertically polarized radiation component exceeds, at any azimuth, the value indicated on the composite radiation pattern authorized by the construction permit.
 5. The permittee/licensee, in coordination with other site users, must reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from radiofrequency electromagnetic fields in excess of FCC guidelines.
 6. Further modification of KAZU(FM), Pacific Grove, California will not be construed as a per se modification of KLVM's construction permit (BMPED-20060410ABX).
- Conditions one through four have been met. See Exhibits 9A, 9B, and 9C.
 - PEF agrees to fully cooperate with other site users to reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from radiofrequency electromagnetic fields in excess of FCC guidelines.
 - PEF agrees that further modification of KAZU(FM), Pacific Grove, California will not be construed as a per se modification of KLVM's construction permit.

Therefore, all Special Operating Conditions of the KLVM Construction Permit (FCC File Number BMPED-20060410ABX) have been met.
