**ENGINEERING TECHNICAL STATEMENT PREPARED BY WILLIAM T. GODFREY, JR.
OF THE FIRM KESSLER AND GEHMAN ASSOCIATES, INC., TELECOMMUNICATIONS
CONSULTING ENGINEERS IN CONNECTION WITH A DISPLACEMENT / DIGITAL
CONVERSION APPLICATION FOR THE GEORGIA PUBLIC TELECOMMUNICATIONS
COMMISSION TELEVISION TRANSLATOR W68AF (BLTT-1916), TOCCOA, GEORGIA.**

The firm Kessler and Gehman Associates, Inc. has been retained by the Georgia Public Telecommunications Commission (GPTC), Atlanta, GA to prepare the engineering portion of a displacement/digital conversion application for the W68AF TV translator facility.

Background

The W68AF TV translator (TX) facility is licensed to operate on analog Channel 68 with an ERP of 0.867 kW using a nondirectional antenna (BLTT-1916) in the vicinity of Toccoa, GA. On January 26, 2006 the FCC released a Public Notice announcing a filing window for LPTV and TX digital companion channel applications beginning May 1, 2006. In response to the Public Notice, GPTC requested engineering services for its ten analog TV translators in preparation for the filing window.

Request for Displacement

Section 73.3572(a)(4)(ii) of the FCC rules states that a TV translator station authorized on a channel from channel 52 to 69 may at any time file a displacement relief application for a change in output channel and it will not be considered an application for a major change. GPTC is the licensee of the W68AF translator facility which is licensed to operate on out-of-core Channel 68. For this reason, GPTC hereby requests authorization to clear the lower 700 MHz band and displace to an in-core channel for the W68AF translator facility.

Request for Digital Conversion

The GPTC is in the process of awarding a government-funded contract to have its nine digital television broadcast facilities built. The contract includes tower upgrades, new transmitter buildings, transmitters, antennas, etc. Based on the budget for the Georgia digital conversion design-build project, there will not be sufficient funds available to build ten digital companion translators to operate simultaneously with GPTC's ten licensed analog translators. Therefore, in addition to its request for channel displacement, GPTC also respectfully requests authorization to convert the W68AF facility from analog to digital.

Accordingly, the purpose of this application is to obtain FCC authorization to convert the W68AF TX facility from analog to digital and displace channels from the licensed out-of-core analog Channel 68 to the proposed in-core digital Channel 10.

Interference Studies

Exhibit 11 depicts the output of a detailed Longley-Rice interference study that was calculated using the FCC's digital LPTV software and the same make/model Sun Sparc computer work station in order to produce the exact same calculations to ensure that the 0.5% interference threshold for full-service TV/DTV/Class A protection and 2.0% interference threshold for LPTV/TV translator protection would not be exceeded. The population counts and interference calculations were calculated using U.S. Census 1990 data.

An in-core frequency search was performed initially to establish a list of all in-core digital channels with potential for interference-free operation for the W68AF TX facility. Digital Channel 10 was clearly the best looking channel available for the W68AF TX facility with respect to spacing and channel congestion. Referring to the detailed Longley-Rice study depicted in Exhibit 11, it can be seen that the proposed W68AF digital Channel 10 TX facility would not be predicted to cause more than 2.0% interference to digital or analog LPTV/TX stations and would not be predicted to cause more than 0.5% interference to digital or analog

full-service stations or Class A stations. The WNTV-DT Channel 9 Greenville, SC facility is predicted to receive 0.5% interference from the proposed W68AF Channel 10 TX facility which is allowable in accordance with Section 74.793(e) of the FCC rules.

FAA & ASR

An ASR and/or FAA determination is not required since the overall height of the tower is less than 200 feet above ground level and because it passes the slope test for the Toccoa RG Letourneau Field Airport.

Exhibits

Exhibits 1 and 2 represent the proposed W68AF digital Channel 10 TX facility's administration data, antenna and antenna structure specifications.

Exhibit 3 depicts the profile view of the proposed antenna on the antenna structure with all the appropriate elevations.

Exhibit 4 depicts the proposed antenna azimuth pattern.

Exhibit 5 depicts the proposed antenna azimuth pattern tabulation.

Exhibit 6 depicts the proposed antenna elevation pattern.

Exhibit 7 depicts the proposed antenna elevation pattern tabulation.

Exhibit 8 depicts the location of the W68AF site on a 7.5-Minute (Series) Topographic map.

Exhibit 9 depicts the proposed W68AF digital Channel 10 TX facility's 48.0 dBuV/m noise limited contour and demonstrates that it would completely encompass the city of Toccoa, GA.

Exhibit 10 is a contour comparison map between the licensed W68AF analog Channel 68 TX facility and the proposed W68AF digital Channel 10 TX facility.

Exhibit 11 is a detailed Longley-Rice interference study that was calculated using the FCC's digital LPTV software on a Sun Sparc work station using U.S. Census 1990 data.

Exhibit 12 is an FCC TOWAIR study which demonstrates than an FAA authorization or FCC antenna structure registration is not required for the W68AF antenna support structure.

Environmental Impact

The proposed W68AF digital Channel 10 TX facility would have no significant environmental impact as defined in §1.1307 of the FCC Rules. The transmitter, transmission line and antenna system would produce an ERP of 0.2 kW. Assuming, as a worst case scenario, that the maximum lobe of radiation was oriented toward the base of the tower, it would produce a power density six feet above the ground of 0.002 mW/cm^2 . This is only 0.20% of the Maximum Permissible Exposure (MPE) limits for Occupational/Controlled Exposure and only 1.01% of the MPE limits for General Population/Uncontrolled Exposure authorized by the American National Standards Institute (ANSI). Since the operation of the proposed W68AF digital Channel 10 TX facility would not exceed 5.0% of the MPE limit for Occupational/Controlled Exposure or General Population/Uncontrolled Exposure at any point on the ground, the proposed W68AF TX facility would not be considered a "significant contributor" to the RF exposure environment pursuant to OET Bulletin 65, Edition 97-01. Therefore, contributions of exposure from other sources were not accounted for in this analysis. It is safe to conclude that the emissions would be insignificant and well within the maximum allowable requirements.

If other antennas are placed on the tower in the future, the applicant will cooperate with those users by reducing or completely terminating the power to the antenna when maintenance workers are in danger from the electromagnetic radiation emanating from the antenna.

Kessler and Gehman Associates, Inc.

Telecommunications Consulting Engineers

Certification

This technical statement was prepared by William T. Godfrey, Jr., Telecommunications Technical Consultant with Kessler and Gehman Associates, Inc. having offices in Gainesville, Florida and has been working in the field of radio and television broadcast consulting since 1998. He graduated from the University of North Florida with a Bachelor of Arts degree in Criminal Justice and a minor in Mathematics in 1993. As a Professional in the field of Telecommunications he states under penalty of perjury that the information contained in this report is true and correct to the best of his knowledge and belief.

KESSLER AND GEHMAN ASSOCIATES, INC.

A handwritten signature in blue ink that reads "William T. Godfrey, Jr." It is written in a cursive style with a large, stylized "W" at the beginning.

W68AF Digital Channel 10 TV Translator

Toccoa, Georgia

ENGINEERING SPECIFICATIONS

A. Transmitter Site:

Geographic coordinates (NAD27):

North Latitude	34° 36' 32"
West Longitude	83° 21' 51"

Transmitter Site: **Located 2.3 miles NW of Toccoa, GA**

B. Main Studio Site Address: **260 14th Street N.W.** **Atlanta, GA 30318**

C. Proposed Translator Facility:

Digital Channel:	Number: 10
	Frequency: 192-198 MHz
	Frequency Offset: N/A
	Emission Mask: Simple

D. Antenna Height:

Height of Site above Mean Sea Level (AMSL)	414.5 M
Overall Height of Structure Above Ground	60.7 M
(including all appurtenances)	
Overall Height of Structure above Mean Sea Level	475.2 M
(including all appurtenances)	
Height of Site above Average Terrain:	63.7 M
Antenna Height Radiation Center (R/C) Above Ground	59.5 M
Antenna Height R/C Above Mean Sea Level	474.0 M
Average of All Non-Odd Radials	350.8 M
Antenna Height R/C Above Average Terrain	123.2 M

E. System Parameters – Horizontal Polarization:

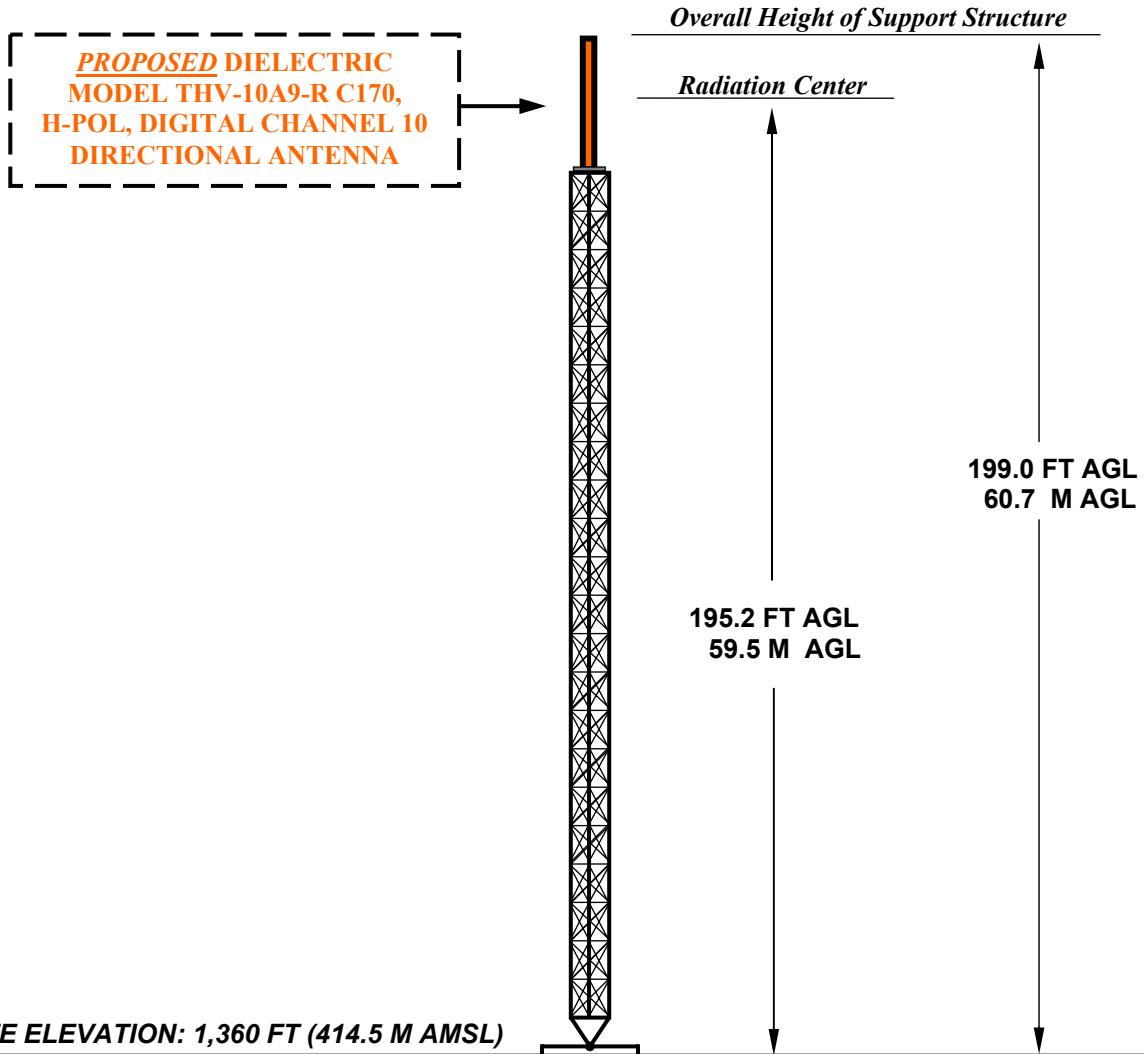

Average Power Required:	0.01 kW
Input Power:	0.01 kW
Transmission Line Loss:	0.79 dB
Transmission Line Efficiency:	83.4%
Maximum Antenna Gain in Beam Maximum:	12.30 dB
Maximum Antenna Gain in Horizontal Plane:	12.08 dB
Maximum Effective Radiated Power:	-6.99 dBk
In Beam Maximum:	0.20 kW
Maximum Effective Radiated Power:	-7.21 dBk
In Horizontal Plane:	0.19 kW

TOWAIR Determination Results

A routine check of the coordinates, heights, and structure type you provided indicates that this structure does not require registration.

*** NOTICE ***

TOWAIR's findings are not definitive or binding, and we cannot guarantee that the data in TOWAIR are fully current and accurate. In some instances, TOWAIR may yield results that differ from application of the criteria set out in 47 C.F.R. Section 17.7 and 14 C.F.R. Section 77.13. A positive finding by TOWAIR recommending notification should be given considerable weight. On the other hand, a finding by TOWAIR recommending either for or against notification is not conclusive. It is the responsibility of each ASR participant to exercise due diligence to determine if it must coordinate its structure with the FAA. TOWAIR is only one tool designed to assist ASR participants in exercising this due diligence, and further investigation may be necessary to determine if FAA coordination is appropriate.
