

Paul Strieby and Matt Tuter are presently authorized to construct the reference station (Fac ID 125422) on Channel 27+ at Cohasset Ridge, near Chico, California. Having been displaced by co-channel BT KTSF-DT, San Francisco, California, it is now proposed to relocate the facility to a site slightly south of Oroville, California, at the same time changing to Channel 38-. Overlap of the authorized and proposed contours is shown on the attached Exhibit 6A.

A review of all available records indicates that interference is predicted with regard to various authorizations or allocations. In this instance, the attached Allocations Study shows that population loss to any of these per O.E.T. Bulletin No. 69 procedures would be less than 0.5%.
