ENGINEERING STATEMENT OF CYNTHIA M. JACOBSON, P.E.
IN SUPPORT OF AN
APPLICATION FOR CONSTRUCTION PERMIT
KXNT - NORTH LAS VEGAS, NEVADA
840 kHz - 50.0 kW DAY/16.0 kW NIGHT - DA-2
FACILITY ID: 33068

Applicant: CBS Radio Stations Inc.

I am a Consulting Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia.

My education and experience are a matter of record with the Federal Communications Commission. I am a Registered Professional Engineer in the Commonwealth of Virginia, Registration No. 027914.

GENERAL

This office has been authorized by CBS Radio Stations Inc. ("CBS"), licensee of Standard Broadcast Station KXNT, North Las Vegas, Nevada, to prepare this Engineering Statement, FCC Form 301 (Section III), and the attached figures in support of an Application for Construction Permit to relocate the KXNT antenna system approximately 19.3 kilometers southwest of the licensed site and to make changes to the daytime and nighttime directional patterns. KXNT is presently licensed to operate on 840 kHz with a power of 50.0 kW daytime and 25.0 kW nighttime using the same directional pattern for both the day and night operation, but at different power levels.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 2

KXNT's licensed transmitter site is no longer usable and qualifies as a "loss of site", as justified later herein.

The instant application proposes to collocate the KXNT transmitter facility at the licensed transmitter site of KSFN. KSFN is licensed to North Las Vegas, Nevada and operates on a frequency of 1140 kHz, at a power of 10 kW non-directional during daytime hours and 2.5 kW directional during nighttime hours. KSFN uses a total of four towers for its night directional operation. KXNT proposes to construct five new towers on the KSFN property that will be used solely for the operation of KXNT. KXNT proposes to operate at a power of 50 kW during daytime hours and 16 kW during nighttime hours.

ANTENNA SYSTEM AND DIRECTIONAL PATTERNS

The present KSFN antenna system consists of a total of four towers. The instant application proposes five new towers on the KSFN property. Two of the five new towers will be employed for the KXNT daytime operation. The nighttime operation will employ four of the proposed towers. One tower will be in common to both the KXNT day and night operations. The towers will be 90.1 electrical degrees in height.

The proposed daytime horizontal plane standard radiation pattern is shown on the polar graph of Figure 3. The daytime horizontal plane inverse distance fields are tabulated in Figure 4. Figure 5 contains a polar graph of the proposed nighttime horizontal plane standard radiation pattern and Figure 6 contains a tabulation of the proposed nighttime

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 3

horizontal plane inverse distance fields. Figures 7 through 18 contain tabulations of the vertical inverse distance fields for the proposed nighttime pattern.

GROUND SYSTEM

The ground system will consist of 120-89.2 meter spaced copper radials (except where shortened due to property boundaries or where bonded to a transverse copper strap between towers). A 7.3 meter square ground screen will be located at the base of each tower. The new ground radials will tie into the existing KSFN ground system wherever possible.

FAA NOTIFICATION AND TOWER REGISTRATION

The proposed new antenna structures will be 91.1 meters AGL and 700.7 meters AMSL, see Figure 1.

A Notice of Proposed Construction, FAA Form 7460-1 will be filed with the Federal Aviation Administration. Following FAA approval, tower registration will be completed.

SITE AND SURROUNDING TERRAIN

The proposed antenna/transmitter location and surrounding terrain characteristics are contained in FCC files for KSFN. The proposed center of array coordinates (NAD-27) array are:

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 4

North Latitude: 36-16-03
West Longitude: 115-02-41

Site photographs of the proposed site are contained in the KSFN engineering files at the Commission.

BLANKETING AND STATION INTERACTION

The population within the proposed KXNT daytime 1000 mV/m contour is less than 300 persons. The population within the proposed nighttime 1000 mV/m contour is greater than 300 persons, but less than 1.0 percent of the population within the proposed nighttime 25 mV/m contour. These contours are shown on the map of Figure 20. In response to all complaints of blanketing interference, the applicant will undertake steps to mitigate the interference in accordance with the requirements of Section 73.88 of the Commission's Rules and Regulations.

The proposed KXNT antenna site is collocated with AM station KSFN. Filters and detuning circuitry will be installed by the applicant to minimize interaction between the two stations such that no adverse impact will result from the collocation of the two stations. The site is located greater than 3 kilometers from all other area AM stations. There are no FM stations or TV stations located within 10 kilometers of the proposed site. It is expected that no detrimental interaction will occur with any station.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 5

COVERAGE CONTOURS

The present and proposed daytime and nighttime 1000 mV/m predicted field strength contours are shown on the maps of Figures 19 and 20, respectively.

The present and proposed daytime service contours are shown on the map of Figure 21. The proposed 5.0 mV/m daytime contour fully encompasses the entire city of license, North Las Vegas, Nevada.

The present and proposed daytime protected contours are shown in Figure 22.

The present and proposed predicted nighttime service contours are shown on the map of Figure 26. The present and proposed nighttime interference-free contours serve the entire community of license. The proposed 5.0 mV/m nighttime contour will encompass 100% of the city of license, see Figure 26.

DAYTIME ALLOCATION STUDY

Four stations were considered in detail regarding the daytime allocation. These stations are:

KLAA	830 kHz	Orange, California,
KMPH	840 kHz	Modesto, California,
XEZF	850 kHz	Mexicali, BN, Mexico, and
KLSQ	870 kHz	Whitney, Nevada.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 6

The map of Figure 23 depicts the daytime allocation situation for the above cited stations as they pertain to the present and proposed KXNT operations. Figure 24 represents an expanded view of the allocation map in order to provide greater clarity of the relationship of the various protected and interfering contours. The distances to all groundwave contours were calculated using the equivalent distance method. Contours were calculated at 5 degree intervals using ground conductivity values shown on the FCC's M-3 soil conductivity map, except for the use of measured ground conductivities contained in Appendix A and B. A tabulation by segment distance of the measured conductivities is shown in Appendix A. Appendix B contains a tabulation of the measurement data along with a presentation of the field strength graphs. Tabulations of distances to groundwave contours and conductivity profiles are not included herein, but can be provided upon request.

CO-CHANNEL PROTECTION

As depicted on the map of Figure 23, there is no overlap of the present or proposed KXNT 0.025 mV/m contour with the 0.5 mV/m contours of KMPH. Likewise, the 0.025 mV/m contours of KMPH do not overlap the present or proposed 0.5 mV/m contours of KXNT.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 7

FIRST-ADJACENT CHANNEL PROTECTION

The map of Figure 23 shows a small area of existing overlap between the 0.25 mV/m and 0.5 mV/m contours of KXNT and KLAA. The instant proposal would decrease the current area of overlap of the 0.25 mV/m and 0.5 mV/m contours with respect to KLAA. No overlap exists or is proposed with, XEZF.

THIRD-ADJACENT CHANNEL PROTECTION

The map of Figure 23 shows existing overlap of the 25 mV/m contours of the licensed KXNT facility and the licensed facilities of KLSQ. Figure 24 shows the area of overlap in greater detail. The instant proposal would reduce the amount of 25 mV/m contour overlap with KLSQ.

NIGHTTIME ALLOCATION STUDY

Figure 25 is a tabulation of the RSS calculations for co-channel and first-adjacent channel stations that may be impacted by the instant proposal. The proposed nighttime facility of KXNT will not raise the 25% or 50% RSS limit of any domestic station or the 50% RSS limit of any foreign station.

Where KXNT enters the 50% exclusion bracket, a 10% radiation reduction is proposed with the exception of co-channel station KMPH, Modesto, California and first-adjacent station KLAA, Orange, California. A review of the nighttime interference studies, see Figure 25, on a station-by-station basis demonstrates the proposed KXNT nighttime

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 8

facility is compliant with all current Commission allocation standards, except as detailed below.

The frequency of 840 kHz is a US Class A channel. WHAS, Louisville, Kentucky is the Class A station of concern. The present and proposed 0.025 mV/m - 10% skywave contour of KXNT and the 0.5 mV/m - 50% skywave contour of WHAS are shown on the map of Figure 28. No prohibited overlap of skywave contours is predicted to occur from the proposed nighttime facility of KXNT.

Because of the close proximity of third-adjacent station KLSQ, 870 kHz, Whitney, Nevada, a nighttime groundwave study was conducted. Figure 27 depicts the 25 mVm nighttime contours of KXNT and KLSQ and no overlap is predicted to occur.

WAIVER REQUEST

KXNT currently enters the nighttime RSS 50% exclusion bracket of co-channel station KMPH, Modesto, California and first-adjacent station KLAA, Orange, California. Under Section 73.182(q), Note 1, of the Commission's Rules, KXNT would be required to reduce radiation by 10% at the appropriate vertical angle toward KMPH and KLAA. KXNT proposes a 3.67% reduction in radiation toward KMPH and a 6.78% reduction in radiation toward KLAA.

The inability of KXNT to meet the radiation reduction to KMPH and KLAA is complicated for the following reasons:

- replication of existing service

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 9

- the 19.3 kilometer site move
- property constraints for the construction of new towers
- protection of the RSS of several stations
- protection of the night groundwave contour of KLSQ
- development of a technically feasible directional antenna design that meets protection criteria
- location of desired major lobe is toward the KLAA protection

In the design of a directional night antenna system, it was also necessary to reduce the nighttime power from 25 kW to 16 kW to meet protection to co-channel and adjacent stations.

On October 24, 2002, CBS notified the FCC that KXNT began operating at reduced power because of a newly constructed power distribution line in the nearby vicinity that was distorting the licensed directional parameters. On November 12, 2002, a request for Special Temporary Authority¹ was filed as restoration to licensed authorized power could not be achieved while keeping the monitoring points within licensed tolerances. On November 22, 2002, the Commission granted the STA to allow KXNT to operate at variance from licensed values and at reduced power.

CBS has requested many extensions and continues to operate under an STA.² Since there is no satisfactory resolution to the distortion of the KXNT directional arrays,

¹FCC File No. BSTA-20021112ADB

²Last extension request submitted January 28, 2008.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 10

it has been determined that the current site is unusable, thereby warranting a relocation of KXNT to a new site.

Page one of Appendix C depicts the layout of the Nevada Power, 500 kilovolt transmission line. Page two of Appendix C depicts the transmission line imposed on a USGS 1:24,000 scale USGS topographic map in relation to the KXNT site. KXNT is bound approximately 180 degrees by these transmission towers. Further, these maps do not depict the additional newly built transmission line located to the north, northwest. A satellite view, page three of Appendix C, depicts another recently constructed transmission line and generating plant to the north, northwest. Clearly, it is understandable why it is impossible to maintain the KXNT patterns within licensed tolerances.

KXNT initially developed the site in a remote area, far removed from re-radiation sources. It has only been in the last several years that re-radiation sources have encroached upon the once remote KXNT site; thus making the site useless for the operation of an AM directional array.

As delineated in MM Docket 87-267³, the Commission recognized that often licensees are required to make changes to their stations because of circumstances beyond their control (such as loss of site) as is the case for KXNT. In such situations, the Commission acknowledged they would allow some flexibility and entertain a waiver. The proposed facilities of KXNT will result in a 3.67% signal reduction to KMPH and a 6.78%

³Report and Order, Released October 25, 1991, *Review of the Technical Assignment Criteria for the AM Broadcast Service*.

KXNT - NORTH LAS VEGAS, NEVADA
PAGE 11

reduction to KLAA. It is respectfully that KXNT be granted a waiver of Section 73.182(q) of the Rules.

ENVIRONMENTAL IMPACT

This engineering statement certifies compliance with human exposure to radio-frequency radiation. The proposal described herein does not involve high intensity lighting as specified under Section 1.1307(a)(8), nor will it result in human exposure to radio-frequency radiation in excess of the standards specified in Section 1.1307(b).

RADIOFREQUENCY IMPACT

On January 1, 1986, the FCC amended its Rules to implement the National Environmental Policy Act of 1969 (NEPA). This amendment established RF radiation protection guidelines to be used to determine if potentially harmful RF exposure is possible from an FCC-regulated transmission facility. Effective October 15, 1997, the FCC adopted revised guidelines and procedures for evaluating environmental effects of RF emissions. These revised guidelines incorporate two tiers of exposure limits based on whether exposure occurs in a "controlled" (occupational) situation or an "uncontrolled" (general population) situation. The FCC has also revised OET Bulletin No. 65 entitled, "Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields," to aid in the radiation exposure analysis. This bulletin, as well as other current literature, provides detailed information for conducting an analysis

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 12

including tables and mathematical equations that can be used to determine compliance with the Commission's guidelines.

The proposed facility will be co-located with the 1140 kHz operation of KSFN, but no towers are in common. Fencing requirements are based solely on the KXNT operation.

CALCULATION METHODS

Verification of compliance with FCC-specified guidelines for human exposure to RF radiation was obtained from OET Bulletin No. 65.

Table 2 of Supplement A (Edition 97-01) to OET Bulletin 65 (Edition 97-01) provide compliance distances for tower heights of 0.25 wavelength. The electrical height of the proposed towers at the KXNT frequency of 840 kHz is 0.25 wavelength. The highest combined input power to any tower in any operating mode is 41.93 at the input to tower #1 of the proposed daytime directional antenna system. Under this worst-case scenario, a fence of no less than 4.0 meters would be compliant with the radio-frequency energy requirements of the FCC regarding the occupational/controlled and the general population/uncontrolled MPE limits.

Fencing insuring compliance with the general population protection requirement will be provided. The fence will be locked to preclude public access to the tower and appropriate warning signs will also be posted. It is expected that electromagnetic field strength measurements will be conducted to establish that the MPE limits specified by the FCC are not exceeded and that the fencing is appropriate.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KXNT - NORTH LAS VEGAS, NEVADA
PAGE 13

OCCUPATIONAL SAFETY

As stated above access to the area surrounding the base of each of the KXNT towers will be restricted to authorized maintenance personnel only. The licensees of KXNT and KSFN, in a cooperative effort, will institute joint procedures to insure protection of station personnel and tower contractors working on or in the immediate vicinity of the towers. Procedures will be followed during times of service or maintenance of the transmission systems to insure that personnel are not exposed to energy levels in excess of the maximum permissible exposure limit.

In light of the above, the proposed facility would be categorically excluded from RF environmental processing under Section 1.1307(b) of the Commission's Rules.

CONCLUSION

It is submitted that the proposed facility as described herein would comply with the technical standards of the Commission's Rules and Regulations. This engineering statement, Section III of FCC Form 301, and the associated figures were prepared by me or under my direct supervision and are believed to be true and correct.

DAYTIME ALLOCATION STUDY (EXPANDED)
KXNT(AM) - NORTH LAS VEGAS, NEVADA
840 KHZ - 50 KW DAY/16 KW NIGHT - DA-2
FEBRUARY, 2008

Frequency: 840

Explanation of "CODE" which appears on the right edge of this report:

```

CODE
123456
|||||--- [6] Corresponding expanded band domestic status (if
|||||      this is a lower band station)
|||||--- [5] Not included in RSS Calculation because:
|||||      (1) Deleted Domestically
|||||      (2) Application
|||||      (3) Petition for Expanded Band
|||||      (4) Objected
|||||      (5) B-List or D-List
|||||      (6) Class D station (formally 2S or 3S)
|||||      (7) Cuban Operation
|||||      (8) Multiple Entry
|||||      (9) Test record
|||||--- [4] FCC Dummy Data Code
|||||      (B) Some data assumed; (V) Vertical antenna parameters assumed;
|||||      (1) Vertical and horizontal antenna parameters assumed;
|||||      (2) Coordinates are assumed
|||||--- [3] FCC Bad Record Code
|||||      (B) Some data known to be bad; (V) Bad vertical antenna parameters;
|||||      (1) Bad coordinates; (2) Bad horizontal antenna parameters;
|||||      (3) Bad horizontal and vertical antenna parameters
|||||--- [2] IFRB Notified Status
|||||      (A) Negotiated Priority; (P) Proposed; (T) Informal Proposal
|||||      (O) Operating; (U) Un-notified; (Z) Test Record
|||||--- [1] Domestic Status
|||||      (C) Construction Permit; (L) License; (A) Application;
|||||      (D) Deleted; (M) Petition for Expanded Band;
|||||      (P) Planned expanded band; (T) Test;
|||||      (S) Petition for expanded band w/ stereo

```
