## Engineering Statement and Summary

This application proposes a change to non directional antenna at the current site of KVRE (FM), with antenna HAAT and ERP remaining unchanged.

This is made possible by the reallocation of Station KASR, Conway, Arkansas to the city of Vilonia, Arkansas, and a change in transmitter site and change to Class C-3. This is authorized by the grant of the application BPH-20040510AAN for KASR.

From the new site for KASR, there will no longer be short spacing to KVRE, hence this application to authorize non directional operation.

The applicant realizes that operation with non directional facilities cannot begin until KASR begins operation at it's new site, and that such a condition will be imposed on the construction permit for KVRE.

This application and all exhibits were prepared by J. Boyd Ingram, who has practiced before the Commission for 46 years, and whose qualifications are well established.

Should questions arise, please contact the undersigned.
