

Exhibit 26
73.207 Spacing Exhibit
White Park Broadcasting
KHNA, Warren AFB WY
277C2

White Park Broadcasting proposes to modify its existing construction permit (BNPH-20060310AAL) to raise its center of radiation 7m to accommodate the tower owner's request to do so. The ERP has been reduced a corresponding amount to maintain almost identical contour distances as the current construction permit.

No other changes are proposed.

The first record is the current Construction Permit for KHNA that this application will supersede. The second record is KRFX which is short-spaced under Section 73.207, but meets the separation requirements of Section 73.215.

The proposed operation requests to utilize contour protection under Section 73.215 toward KRFX, Denver CO. Compliance with section 73.215 is documented in exhibit 30.

All other records indicate minimum spacing as required by section 73.207 have been met.

Figure 1 demonstrates compliance with Section 73.207 with the explanations noted above.
