

EXHIBIT 12

Page #1, Waiver Request of Section 74.1204

New-T, Sandy Plains, GA, Channel 229 10 Watts
Calvary Chapel of Twin Falls, Inc. 7/03

The proposed site is contained entirely inside the service contour of second-adjacent station WSTR, SMYRNA, GA

WSTR

The proposed site is contained entirely inside the service contour of second-adjacent Station WSTR, Channel 231, Class C, 100kW, Smyrna, GA. As shown by the map on **page #2** of this waiver request, the level of the least contour of second-adjacent station WSTR, which is the FM Booster, arriving protected F(50,50) signal at the proposed transmitter site is 77-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to WSTR is 117-dBu (free-space contour method employed). This means that the 117-dBu interfering signal would, in the worst case at the maximum radial, extend 32 meters from the center of radiation, which is proposed at 121 meters AGL. A 7.5 min Topo Map is being supplied to show that there are no buildings tall enough to enter this interference area. Since no population inhabits this 117-dBu interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station WSTR.
