

EXHIBIT 12

Page #1, Waiver Request of Section 74.1204

K207CS, Wenatchee, WA 100 Watts
Calvary Chapel of Twin Falls, Inc. 1/04

The proposed site is contained entirely inside the service contour of third-adjacent Stations FM Translator K204DD, Wenatchee and KPLW, Wenatchee, WA

K204DD

The proposed site is contained entirely inside the service contour of third-adjacent FM Translator K204DD, Channel 204, Class D, .012kW, Wenatchee, WA. As shown by the map on **page #2** of this waiver request, the level of the least contour of third-adjacent station K204DD, which is the station's least arriving protected F(50,50) signal at the proposed transmitter site is 62-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to K204DD is 102-dBu (free-space contour method employed). This means that the 102-dBu interfering signal would, in the worst case at the maximum radial, extend 567 meters, or .567 km from the base of the tower. A 2.5 section of the 7.5 min Topo Map Wenatchee, WA, with a .65km circumference is being submitted to show that the population begins outside this interference area. K207CS is located on an AM tower belonging to Station KKRK. Since no population inhabits this 102-dBu interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to third-adjacent channel station K204DD .

KPLW

The proposed site is contained entirely inside the service contour of third-adjacent Stations KPLW, Channel 210, Class C2, 6kW, Wenatchee, WA. As shown by the map on **page #2** of this waiver request, the level of the least contour of third-adjacent station KPLW, which is the station's least arriving protected F(50,50) signal at the proposed transmitter site is 85-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KPLW is 125-dBu (free-space contour method employed). This means that the 125-dBu interfering signal would, in the worst case at the maximum radial, extend 40 meters from the center of radiation, which already exists at 74 meters AGL. This interference contour does not touch the ground and the submitted 2.5 section of the 7.5 min Topo Wenatchee, WA will reveal there are no buildings within the interference area that are tall enough to be effected. Since no population inhabits this 125-dBu interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to third-adjacent channel station KPLW.
