## **EXHIBIT 23.2**

### **TABULATION OF POPULATION AND AREA**

<b><u>CONTOUR</u></b>	<b><u>AREA</u></b>	<b><u>POPULATION</u></b>
1.0 mV/m	7,146.0 km <sup>2</sup>	226,895

The population within the 1.0 mV/m contour was determined by superimposing the desired contour onto U.S. Standard Civil Division maps of the 2000 Census, and assuming uniform population distribution within each minor civil division. The data was computer generated using the InterDLG™ program from V-Soft™ Communications.

The computer generated service area is based on the average distance to the 60 dBu service contour using 360 equally spaced radials.
