

Exhibit 13

Clearance to WSRV License and Application

This instant translator application clears all allocation constraints of Section 74.1204. On first glance, it appears that interference is created to WSRV, Gainesville, GA. However, Section 74.1204(d) instructs us:

“In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable.”

WSRV (BLH-19980825KB) is authorized 100 KW ERP from 797 meters AMSL. WSRV (license) places 73.4 dBu over the proposed translator site. Adding the 40 dBu U/D ratio to the 73.4 dBu signal produces an interfering contour of 113.4 dBu. This 113.4 dBu signal extends 47.3 meters from the proposed translator antenna.

WSRV (Application BPH-20070118ACV) is requesting a power of 100 KW from 634 M AMSL. This WSRV application will place 62.8 dBu over the proposed translator site. Adding the 40 dBu U/D ratio to the 62.8 dBu signal produces an interfering contour of 102.8 dBu. This 102.8 dBu signal extends 161.2 meters from the antenna.

The site proposed herein is nearly atop Chenocetah Mountain. There are no homes or businesses within 47.3 meters (with regard to WSRV license) or within 161.2 meters (with regard to WSRV Application). Based on the foregoing explanation showing that no persons will receive interference because there are no residents within the small interference area, it is thought this application is in compliance with Section 74.1204 using Section 74.1204(d).
