

ENGINEERING STATEMENT

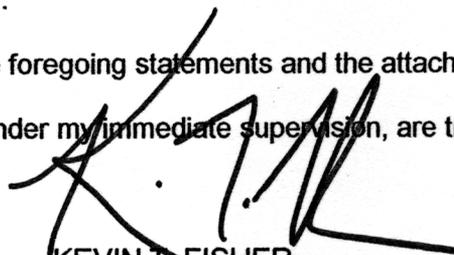

The engineering data contained herein have been prepared on behalf WCNC-TV, INC., permittee of WCNC-DT, Channel 22 in Charlotte, North Carolina, in support of its Application for Modification of Construction Permit BPCDT-19991005ABC, to specify a reduction in effective radiated power. No change in transmitter site, antenna site, effective antenna height or antenna model is proposed herein.

Exhibit B provides directional antenna pattern data. Exhibit C is a map upon which the predicted service contours are plotted. As shown, the city of license is completely contained within the proposed 48 dBu service contour. A power density calculation is provided in Exhibit D. It is not expected that the proposed facility would cause objectionable interference to any other user of the site proposed herein, but the owner of WCNC-DT recognizes its obligation to correct any such interference that may occur.

We have not included an interference study with this application, since the net effect of this proposal is a slight reduction in coverage, as a result of a 0.2 dB reduction in effective radiated power.

Since no change in the overall height or location of the existing tower is proposed herein, the FAA has not been notified of this application. In addition, the FCC issued Antenna Structure Registration Number 1001294 to this tower.

I declare under penalty of perjury that the foregoing statements and the attached Engineering Report, which was prepared by me or under my immediate supervision, are true and correct to the best of my knowledge and belief.

KEVIN T. FISHER
