

EXHIBIT 12

Page #1, Waiver Request of Section 74.1204

K208EH, Legion, TX 62 Watts ERP
Calvary Chapel of Twin Falls, Inc. 4/03

The proposed site is contained entirely inside the service contour of third-adjacent station KTXI, Ingram, TX

KTXI.LIC

The proposed site is contained entirely inside the service contour of third-adjacent Station KTXI, Channel 211, Class C2, 50 kW, Ingram, TX. As shown by the map on **page #2** of this waiver request, the level of the third-adjacent station KTXI arriving protected F(50,50) signal at the proposed transmitter site is 80-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KTXI is 120-dBu (free-space contour method employed). This means that the 120-dBu interfering signal would, in the worst case at the maximum radial, extend 56 meters from the center of radiation, which is proposed at 85 meters AGL. This tower is located in an isolated area where there is no population. Since no population inhabits this 120-dBu interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to third-adjacent channel station KTXI.
