K253BV (CP), Oklahoma City, OK Facility ID 140403

Minor Modification of BNPFT-20130826AGO

EXHIBIT 17

January 2014

Environment Impact & RFR Compliance Statement

FM translator K253BV will be located at an established communications site that is in compliance with all environmental impact requirements.

The minor modification of K253BV proposes an increase in the ERP to 0.130 kW (H&V, DA) with no change to the antenna COR AGL of 180 meters. For a worst case estimation at 2 meters above ground level at the base of the tower the RFR is no more than **0.1%** of the general population/uncontrolled MPE limit.

Per OET 65, facilities that contribute at the site no more than 5% of the general population/uncontrolled MPE limit comply with the requirements of OET 65 with no further study. Therefore the proposed minor modification of K253BV complies with all environmental and RFR requirements.

RFR hazard signs are posted at the site and the site has restricted access to only authorized personnel. The applicant certifies that in cooperation with other users of the site all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations. Information pertaining to the contact representative of the facility will be posted.
