

ENGINEERING STATEMENT

The engineering data contained herein have been prepared on behalf of WJBK LICENSE, INC., permittee of WJBK-DT, Channel 7, in Detroit, Michigan, in support of this supplement to its pending application for modification of Construction Permit BMPCDT-20080623ACT, which specifies an increase in power and a new antenna.

In the referenced application, the proposed effective radiated power of 60 kw and the antenna height above average terrain of 314 meters exceeds the combination allowable in Section 73.622(f)(7)(i) of the Commission's Rules. However, the coverage area of the proposed facility does not exceed that of the present analog WJBK facility on Channel 2, as shown in the attached map. The area within the WJBK(TV) Grade B (47 dBu) contour is 33,968 square kilometers, whereas that within the proposed WJBK-DT 36 dBu service contour is just 31,900 square kilometers. Therefore, the facility proposed in BMPCDT-200806123ACT meets the terms of Section 73.622(f)(5) of the FCC's Rules, which allow a station proposal to exceed the power/height limitations of Section 73.622(f)(7)(i) of the Rules as long as the coverage of the proposed facility does not exceed that of the largest station in the market.

I declare, under penalty of perjury, that the foregoing statements and the attached exhibit, which was prepared by me, are true and correct to the best of my knowledge and belief.

KEVIN T. FISHER
