

Exhibit 8

At the time the modification application (File No. BPED -20030924AAB) was submitted, a COR AGL of 397 meters was used for the antenna. That figure was based on data provided by the other tenants of the common panel antenna that WPCS shares. Subsequently, a professional survey firm was hired to verify the elevation data for the panel antenna's COR. The surveyor determined the antenna's COR AGL to be 398.53 meters. As this falls within the 2 meters tolerance permitted by FCC rule part 73.1690(c)(1), it is respectfully requested that the COR AGL for WPCS' new license (facility ID 52230) reflect the antenna's actual COR AGL of 399 meters (398.53 meters rounded up to nearest whole meter).
