Jeremy D. Ruck, being first duly sworn, deposes and says that he is a Consulting Engineer, employed by D. L. Markley & Associates, Inc. and that he has been retained by Withers Broadcasting Company of Illinois, LLC, to prepare the following engineering exhibits, that he holds a Bachelor of Science Degree in Electrical Engineering, and that his qualifications have been accepted by the Federal Communications Commission, and the following exhibits have been prepared by him and that they are true and correct to the best of his knowledge and belief.

Jeremy D. Ruck, Affiant

Subscribed and sworn to before me this 12<sup>th</sup> Day of January 2006:

\_\_\_\_\_  
Paulette J. Hoskins  
Notary Public

My Commission Expires:

**Application for Direct Measurement of Power**

The following engineering statement and attached exhibits have been prepared for Withers Broadcasting Company of Illinois, LLC, licensee of standard broadcast station WMIX at Mount Vernon, Illinois, and are in support of their application for direct measurement of power.

This application contains a partial proof of performance for the daytime antenna system for WMIX. The preparation of this proof was necessitated by a condition placed on the construction permit for FM station WBMV(FM) (FCC File Number BPED-20020523AAX). As a result, a copy of this application is also being filed as an amendment to the license application for WBMV(FM) (FCC File Number (BLED-2005019AHR)). Tower #1 in the WMIX daytime array supports the transmitting antenna for WBMV(FM)

A minor adjustment of the directional array was performed following the installation of the WBMV(FM) antenna. Following this adjustment, at least 8 points were measured on the three monitor point radials plus an additional three radials, or six radials. As the data in this application demonstrates, the measured pattern is within authorized limits for the facility.

Due to the ratios of the current measurements to those in the last full proof of performance, which was in 1962, a change in the limits of the three monitor

points is respectfully requested. The description page for each of the three monitor points lists the recommended or proposed limit for each of the monitor points.

The monitor point descriptions and photographs have been updated in this application. In addition, route maps to these locations have been included. There are no changes proposed to the monitor points other than a requested change in their limits.

As previously mentioned, this application pertains only to the daytime site for WMIX. There have been no changes proposed or made with regard to the nighttime site.

### **SECTION III - LICENSE APPLICATION ENGINEERING DATA**

Name of Applicant

## Withers Broadcasting Company of Illinois, LLC

PURPOSE OF AUTHORIZATION APPLIED FOR: (check one)

Station License

## Direct Measurement of Power

This application pertains to  
the daytime site only.

1. Facilities authorized in construction permit					
Call Sign WMIX	File No. of Construction Permit (if applicable) Not Applicable	Frequency (kHz) 940 kHz	Hours of Operation Unlimited	Power in kilowatts	
				Night 1.5	Day 5.0
2. Station location					
State Illinois			City or Town Mount Vernon		
3. Transmitter location					
State IL	County Jefferson	City or Town Mount Vernon	Street address (or other identification) 4 miles north on IL 37		
4. Main studio location					
State IL	County Jefferson	City or Town Mount Vernon	Street address (or other identification) 3501 Broadway		
5. Remote control point location (specify only if authorized directional antenna)					
State IL	County Jefferson	City or Town Mount Vernon	Street address (or other identification) 3501 Broadway		

6. Has type-approved stereo generating equipment been installed?

Yes  No

7. Does the sampling system meet the requirements of 47 C.F.R. Section 73.68?

Yes       No

Not Applicable

Attach as an Exhibit a detailed description of the sampling system as installed.

Exhibit No.  
E-1

8. Operating constants:			
RF common point or antenna current (in amperes) without modulation for night system This application pertains only to the day site.		RF common point or antenna current (in amperes) without modulation for day system 10.4 amperes	
Measured antenna or common point resistance (in ohms) at operating frequency		Measured antenna or common point reactance (in ohms) at operating frequency	
Night	Day	Night	Day
DNA	50	DNA	0

#### **Antenna indications for directional operation**

Towers	Antenna monitor Phase reading(s) in degrees		Antenna monitor sample current ratio(s)		Antenna base currents	
	Night	Day	Night	Day	Night	Day
#1 (E)	---	0	---	1.000	---	4.9 Amps
#2 (W)	---	-29	---	0.320	---	6.7 Amps

Manufacturer and type of antenna monitor: Potomac Instruments AM-19(204)

9. Description of antenna system (If directional antenna is used, the information requested below should be given for each element of the array. Use separate sheets if necessary.)

Type Radiator  guyed steel of uniform cross section.	Overall height in meters of radiator above base insulator, or above base, if grounded. #1 - 156.8 m #2 - 79.8 m	Overall height in meters above ground (without obstruction lighting) #1 - 157.7 m #2 - 81.1 m	Overall height in meters above ground (include obstruction lighting) #1 - 158.7 m #2 - 81.4 m	If antenna is either top loaded or sectionalized, describe fully in an Exhibit.  Exhibit No. DNA
--	---	---	---	---

Excitation

 Series Shunt

Geographic coordinates to nearest second. For directional antenna give coordinates of center of array. For single vertical radiator give tower location.

North Latitude	38 ° 22 ' 14 "	West Longitude	88 ° 55 ' 24 "
----------------	----------------	----------------	----------------

If not fully described above, attach as an Exhibit further details and dimensions including any other antenna mounted on tower and associated isolation circuits.

Exhibit No.  
E-2

Also, if necessary for a complete description, attach as an Exhibit a sketch of the details and dimensions of ground system.

Exhibit No.  
DNA

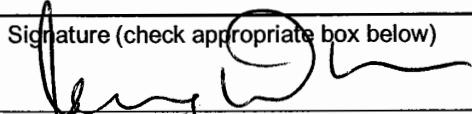

10. In what respect, if any, does the apparatus constructed differ from that described in the application for construction permit or in the permit?

Does Not Apply

11. Give reasons for the change in antenna or common point resistance.

Does Not Apply

I certify that I represent the applicant in the capacity indicated below and that I have examined the foregoing statement of technical information and that it is true to the best of my knowledge and belief.

**Exhibit E-1**

The sampling system as constructed utilizes toroidal current samples at the base of each tower to obtain the current sample for the phase monitor. These samples are in turn fed to phase-stabilized direct buried semi-flexible coaxial cables of equal length. These cables have a solid outer conductor. The samples, once at the transmitter building, are measured with a Potomac Instruments AM-19(204) phase monitor.

**Exhibit E-2**

Tower #1 in the array supports two FM antennas. The first of these two FM antennas is for WMIX-FM and is mounted on a pole at the top of tower #1. The transmission line for this antenna is isolated from the tower through the use of standoff insulators. The second antenna is for KBMV, and an isolator is utilized to isolate the transmission line for this antenna from the #1 element of the WMIX array.

# **Photographs and Descriptions of Monitor Points**

**Photograph and Description of 90 Degree True Monitor Point**

From the entrance to the WMIX daytime transmitter site, proceed north on Illinois Route 37 for 0.2 miles to Old Salem Road. Turn right on Old Salem Road and proceed for 0.3 miles to Idlewood Road. Turn right (east) on Idlewood Road and proceed for 1.2 miles to JC Lake Lane. Turn right (south) on JC Lake Lane and proceed for 0.9 miles to the monitor point, which is located on the east side of the lake. The measured field intensity at this location is 130 mV/m with a recommended limit of 168 mV/m. This location is point 8 on the 90 degree true radial, and is located 2.25 kilometers (1.40 miles) from the WMIX daytime antenna.

**Photograph and Description of 305 Degree True Monitor Point**

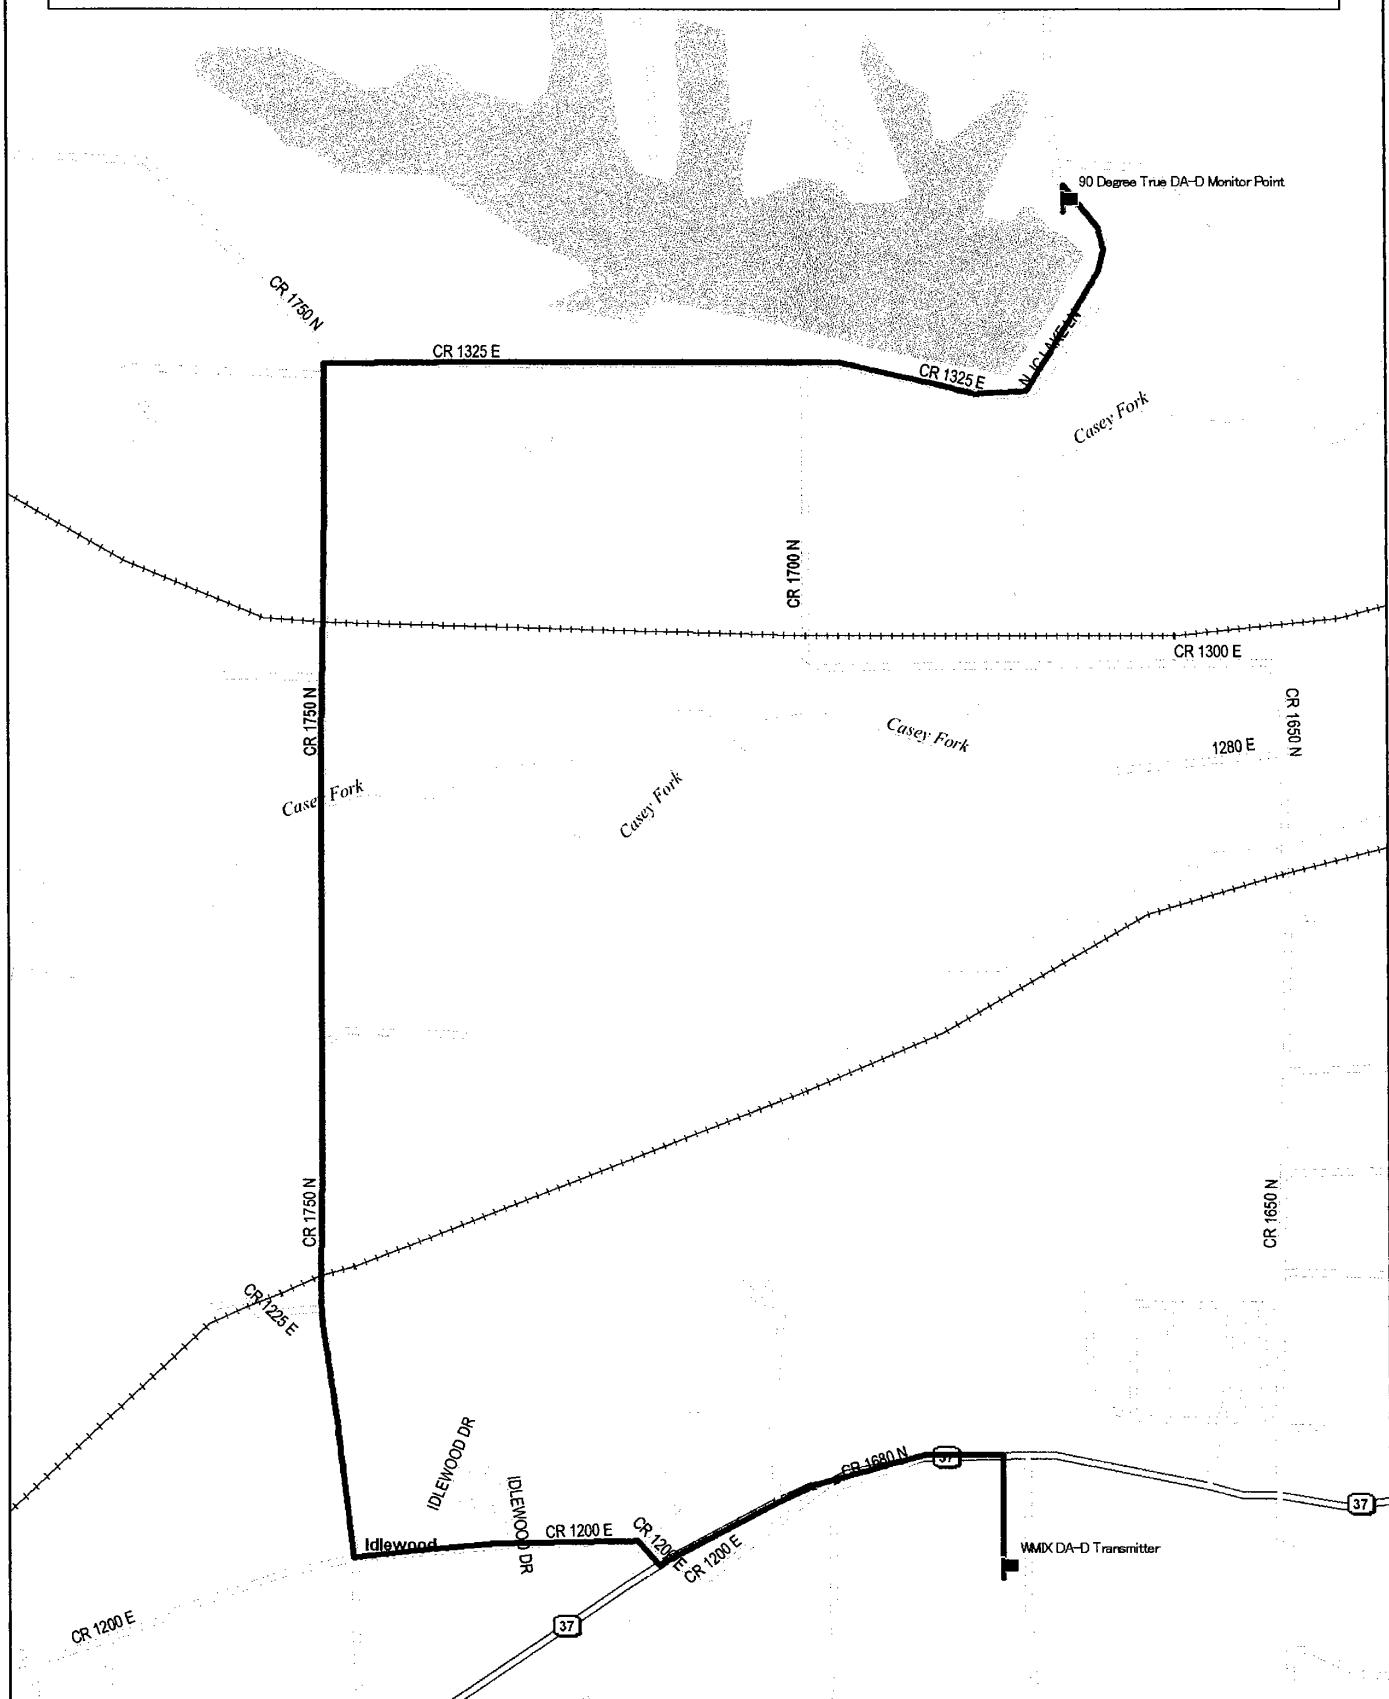

From the 270 Degree True monitor point return north on Old Centralia Road for 1.5 miles to a lane. Turn right on this dirt lane and proceed east for 0.2 miles to the monitor point. The monitor point is located in line with the east edge of a grouping of trees located north of the road. The measured field intensity at this location is 73.0 mV/m with a recommended limit of 93.6 mV/m. This location is point 5 on the 305 degree true radial and is located 3.43 kilometers (2.13 miles) from the WMIX daytime antenna.
