

Exhibit 13A

74.1204(d) Waiver Request for K277CE If Required

A 94 dBu 50:10 contour was generated from the proposed K277CE site using the proposed antenna and proposed center of radiation running the proposed 250 Watts. The population was then ascertained using the 2010 population data base in ComStudy 2.0. The number of people within the 94 dBu contour was zero. In order to be confident of the results, this author then ran a study with a much larger contour of 84 dBu with more than a 10 fold increase in area and still came up with a zero population.

Under the provisions of 74.1204(d), no interference will occur to second adjacent KCHO, Chico California. If required, Huth Broadcasting requests a waiver of the short spacing to the above mentioned station.

Submitted as Exhibit 13B is a coverage map showing the 94 dBu contour.
