

Exhibit 11
Edgewater Broadcasting, Inc.
Adjacent Channel Interference
Corpus Christi, Texas

The Proposed translator on FM Channel 281D with facilities of 7 watts ERP at a maximum 83 meters AAT is within the 60 dBu protected contour of station KOUL (Sinton, TX.) on 2nd lower adjacent channel 279. The F(50,50) contour with respect to KOUL at the proposed translator site is 74 dBu. Utilizing the undesired to desired method of calculating interference, the proposed interfering contour with respect to KOUL is 114 dBu. The interfering contour (calculated by the free space equation in the worst case radial) will extend a maximum of 37 meters from the proposed antenna.

In addition, the proposed translator is within the protected contour of KPUS (Gregory, TX.) on the 2nd upper adjacent channel 283. The F(50,50) contour with respect to KPUS is 68 dBu at the proposed site. The maximum interfering contour of 108 dBu will extend to a maximum of 74 meters from the proposed antenna.

The radiation center of the proposed translator is 78 meters above ground. The interfering contour extending to a maximum of 74 meters is above ground.

Inasmuch as no population inhabits this area, Edgewater Broadcasting respectfully requests a waiver of contour overlap regulations with respect to the proposed translator.
