

WPBB (FM)
Construction Permit Compliance
Effect on WWMI, 1380kHz per FCC 47CFR 1.30002

Condition number three of the WPBB construction permit (BPH-20151201CSW) specifies verification that the replacement of the previous 103-meter tower with the new 162-meter tower will comply with FCC rule 1.30002(a) with respect to distortion of the directional antenna pattern for WWMI (AM), 1380kHz which is located 1.7km away from the subject WPBB (FM) tower.

This exhibit includes a method of moments analysis which will demonstrate that the distortion of the tower will continue to create some ripple in the pattern, however, that distortion is less than 2dB and the pattern shape as well as the WWMI nighttime null structure remains intact. The calculations were made using WWMI licensed operating parameters and analyzed using MININEC Broadcast Professional software.

In the following exhibits, the pattern plots are shown for both day, non-directional operation and nighttime directional operation. It should be noted that there are several other tower structures nearby the WWMI tower. One tower, ASR 1020779, a large self-supporting tower, is only 0.8km from the WWMI array (the WPBB tower is 1.7km away), is NOT detuned and is 205 meters high. Although we did not analyze the effect that ASR 1020779 or other towers may have on WWMI, in a relative sense, it is believed that any effect the WPBB tower may have on the WWMI pattern is minimal when considered with the other nearby

environmental effects. Further, both the previous tower and the new tower are detuned for WWMI.

- Exhibit A shows the calculated effect on the non-directional daytime operation of WWMI with the new WPBB (FM) tower.
- Exhibit B shows the calculated effect on the WWMI nighttime pattern of the licensed WGES tower which was replaced by the new tower supporting WGES and WPBB.
- Exhibit C shows the calculated effect of the new WGES/WPBB tower on the WWMI nighttime pattern.
- Exhibit D shows the MININEC modeling data for the daytime, non-directional WWMI operation without any WGES/WPBB tower.
- Exhibit E shows the MININEC modeling data for the daytime, non-directional WWMI operation with the new WGES/WPBB tower, skirted and detuned.
- Exhibit F shows the MININEC modeling data for the nighttime, directional WWMI operation without any WGES/WPBB tower.
- Exhibit G shows the MININEC modeling data for the nighttime, directional WWMI operation with the new WGES/WPBB tower, skirted and detuned.

This Method of Moments analysis was conducted by Kurt Gorman of Phasetek, Inc. The data was reviewed and compiled into this report by Bert Goldman. Both Gorman's and Goldman's qualifications are a matter of record with the Federal Communications Commission.

This exhibit was prepared on behalf of WPOW License Limited Partnership, licensee of WPBB by Bert Goldman of Goldman Engineering Management. All statements herein are true and correct to the best of his knowledge.

EXHIBIT F- WWMF Nighttime Directional With No tower effect

RADIATION PATTERN rms
geographic coordinate system

Radial distance (meters) = 1,000.

Frequency = 1.38 MHz

Input power = 6,500. watts

Efficiency = 100. %
