**Re:** Auxiliary Antenna  
Bishop Hollow Rd.  
Newtown Square, PA.

Dear Mark,

By this letter Metz Engineers informs you that a field survey was performed on January 19, 2004 and a subsequent field inspection on February 19, 2004 at the WPLY Auxiliary Antenna on Bishop Hollow Road in Newtown Square, PA.

During the field survey, Metz field corps placed a marker at an azimuth of 67 degrees True from the WPLY tower as a reference for alignment of the antenna bays.

Using the antenna installation drawing for ERI Project No.10699 as a reference, our field inspection on February 19, 2004 verified the orientation of the antenna bays to be correct.

In summation, assuming that the mounting hardware was designed, built and installed correctly, as shown in the installation drawing, Metz Engineers certifies that the WPLY (FM) transmitting antenna installation completed on February 12, 2004 is in proper alignment as specified.

Sincerely yours,

*Metz Engineers*
