

EXHIBIT E-4

ENVIRONMENTAL STATEMENT

The antenna is a single bay log periodic to be mounted above the elevator penthouse of the Cathedral Arms apartment building. There are other licensed broadcast facilities on this roof and the addition of this antenna raises no new environmental issues.

Non-Ionizing Radiation

The antenna is approximately 4.6 meters above the roof. The antenna is at the edge of the building pointed over the edge directing the radiation away from all points on the roof. Based on the horizontal antenna pattern and the distance from the antenna to head height on the roof the non-ionizing radiation is less than 5% of the allowable public exposure limit of $200 \mu\text{watts}/\text{cm}^2$.

Access to the roof of the elevator penthouse is restricted to authorized maintenance personnel and placarded warning against entry without a power reduction.

EXHIBIT E-5

TOWER REGISTRATION EXEMPTION

The antenna mast and indeed even the roof of the elevator penthouse intrude into the 100:1 slope from the nearest airport. However, the support mast for the antenna extends only 2.4 meters above the building structure. The mast and the antenna fall within the allowance of 6.1 meters of §17.14(b) and are thus exempt from the registration requirement.
