

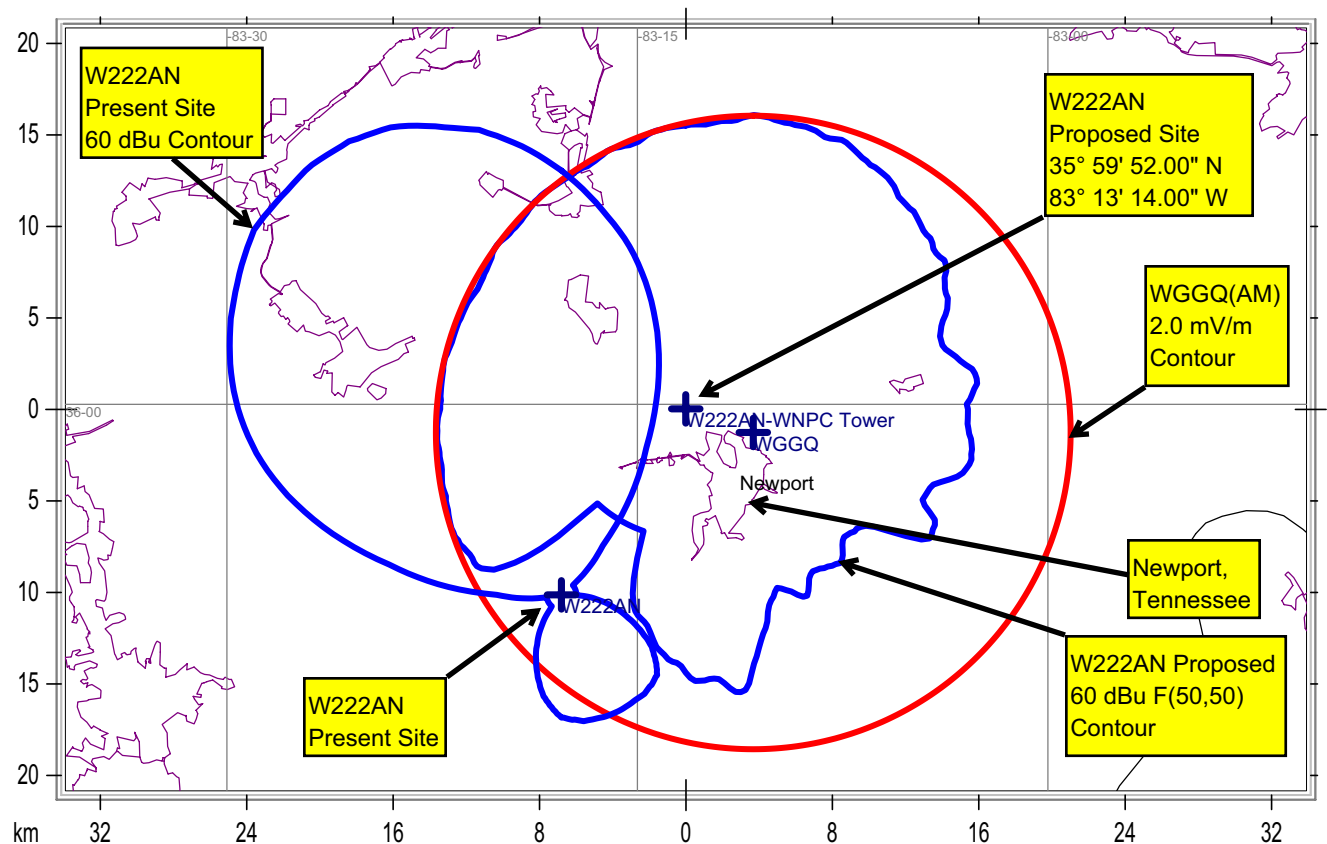

Figure 2 - Map Demonstrating Compliance

This map shows the present and proposed location of W222AN and demonstrates compliance with the Commission's FM translator rules. There is overlap of 60 dBu contours from the W222AN licensed facility and the W222AN proposed facility. Therefore, this Application is a Minor Change.

The proposed W222AN 60 dBu contour is 100% within the 2.0 mV/m contour of the primary station WGGQ(AM) and does not extend more than 25 miles.

The W222AN proposed 60 dBu contour encompasses the city of Newport, Tennessee.
