APPLICATION FOR MODIFICATION OF
DTV CONSTRUCTION PERMIT
FCC FILE NO. BMPCDT-20010926ABO
FACILITY ID 6868
STATION WWLP-DT
SPRINGFIELD, MASSACHUSETTS
CH 11 10 KW (MAX-DA) 247 M

Technical Narrative

This technical exhibit was prepared in support of an application for modification of the construction permit for station WWLP-DT on channel 11 at Springfield, Massachusetts (BMPCDT-20010926ABO). By means of this instant modification application, WWLP-DT proposes to decrease the antenna height on the tower by 21 meters. Specifically, the antenna radiation center height above ground level will decrease from 151 meters to 130 meters, the antenna radiation center height above mean sea level (RCAMSL) will be decrease from 346 meters to 325 meters and the antenna height above average terrain (HAAT) will decrease from 268 meters to 247 meters. No other changes are proposed. The instant application is considered a minor change in facilities pursuant to Section 73.3572(a). Furthermore, as detailed below, the instant application is also acceptable for filing under the criteria set forth in the FCC TV/DTV freeze as there will be no increase in WWLP-DT's authorized DTV service area in any direction.¹

Proposed Facilities

It is proposed to operate WWLP-DT from the authorized WWLP-DT site (NAD27 coordinates: 42-05-05 N, 72-42-14 W) on DTV channel 11 (198-204 MHz) with a directional antenna maximum effective radiated power (ERP) of 10 kW and an antenna HAAT of 247 meters. It is proposed to utilize the authorized Dielectric model THA-C6SP-2H/12HD-1-R directional antenna which will be mounted at the 130 meter level on the existing tower structure and will be oriented at 0 degrees true.² The proposed antenna RCAMSL will be 325 meters (FCC Tower registration 1004484).

¹ See FCC Public Notice dated August 3, 2004 entitled "Freeze on the Filing of Certain TV and DTV Requests for Allotment or Service Area Changes" (DA 04-2446).

Antenna Data

Figure 1 provides graphs of the horizontal and vertical plane relative field patterns for the proposed/authorized Dielectric model THA-C6SP-2H/12HD-1-R, horizontally polarized, directional antenna system.

Response to Paragraph 11 - Interference Protection

Figure 2 is the separation study for DTV channel 11 from the proposed WWLP-DT site. The study has been used to determine the assignments requiring interference studies using the procedures outlined in the FCC's OET-69 bulletin. An interference analysis has been conducted using the procedures outlined in the FCC's OET-69 bulletin which demonstrates that the proposal complies with the interference protection provisions of Section 73.623(c)(2).³ Figure 3 provides a summary of the output of the OET-69 interference analysis program. It is noted that a grid cell size resolution of 2 km and a distance increment of 0.2 km were employed for this analysis.

Class A Allocation Considerations

A study has been conducted which indicates that the WWLP-DT proposal will not create prohibited interference to other existing, authorized or proposed Class A stations.

US-Canadian LOU Compliance

The proposed WWLP-DT transmitter site is located within the US-Canadian border area. However, as the proposal does not involve a change in the authorized transmitter site or extension of authorized coverage, it is not believed that Canadian coordination is necessary. It is also noted that the WWLP-DT transmitter site complies with the minimum distance separation requirements applicable to Canadian NTSC and DTV allotments contained in Appendix 2 of the Letter of Understanding between the FCC and Industry Canada related to use of DTV along the common border (September 2000).

² The major lobe orientations will be at 110°, 151°, 190°, 230°, 270° and 310° true.

³ The du Treil, Lundin & Rackley, Inc. DTV interference analysis program is based on the program and procedures outlined by the FCC in the Sixth Report and Order; subsequent Memorandum Opinion and Order; and FCC OET Bulletin No. 69. A grid cell size resolution of 2 km and a distance increment of 0.2 km were employed.

Compliance with TV Freeze Order

Figure 4 is a map which depicts the location of the predicted 36 dBu, F(50,90) contours for the authorized WWLP-DT operation (BMPCTD-20010926ABO) and the herein proposed WWLP-DT DTV channel 11 operation. As indicated, the 36 dBu contour for the instant modification application is entirely within the 36 dBu contour for the authorized operation. Therefore, it is believed that the instant modification application is acceptable for filing under the criteria set forth in the FCC TV/DTV freeze as there will be no increase in WWLP-DT's DTV channel 11 service area, based on the authorized facilities, in any direction.

City Coverage

Figure 4 also depicts the predicted 43 dBu, F(50,90) coverage contour for the herein proposed WWLP-DT channel 11 operation. As indicated, Springfield is located within the 43 dBu contour. The Springfield city limits were derived from information contained in the 2000 U.S. Census for Massachusetts.

The distances to the predicted 36 dBu and 43 dBu, F(50,90) coverage contours were determined in accordance with the provisions of Section 73.625. The average elevations from 3.2 to 16.1 kilometers from the transmitter site, were obtained from the NGDC 30-second terrain database and were used for determining the distances to coverage contours.

Objectionable Interference

There are no authorized AM stations located within 5 kilometers (3 miles) of the proposed transmitter site. Figure 5 provides a tabulation of all known authorized full service FM and TV stations within 16 kilometers of the proposed WWLP-DT site. Although no adverse electromagnetic impact is expected, the applicant recognizes its responsibility to correct problems, which are a result of its proposed operation.

The proposed site is more than 2600 kilometers from the closest point of the Mexican border. The closest FCC monitoring station is at Canandaigua, New York, approximately 385 kilometers to the northwest. The closest point of the

National Radio Quiet Zone (VA/WV) is more than 580 kilometers to the southwest. The closest point of the Table Mountain Radio Quiet Zone (CO) is more than 2715 kilometers to the west. The closest radio astronomy site operating on TV channel 37 is at Hancock, New Hampshire, located more than 111 kilometers to the north-northeast. These separations are sufficient to not be a concern for coordination purposes.

Environmental Protection Act

The proposed facilities were evaluated in terms of potential radio frequency (RF) energy exposure at ground level to workers and the general public. The radiation center for the proposed DTV antenna is located 130 meters above ground level. The maximum DTV ERP is 10 kW (horizontal polarization). A "conservative" vertical plane relative field value of 0.2 (for angles below 60 degrees downward) is assumed for the antenna's downward radiation (see Sheet 2 of Figure 1). The calculated power density at a point 2 meters above ground level is 0.0008 mW/cm^2 . This is 0.41% of the FCC's recommended limit of 0.20 mW/cm^2 for channel 11 for an "uncontrolled" environment. Therefore, based on the responsibility threshold of 5%, the proposal will comply with the RF emission rules.

Access to the transmitting site is restricted and appropriately marked with warning signs. Furthermore, as this is a multi-user site, an agreement is in effect with the other stations in the event that workers or other authorized personnel enter the restricted area or climb the tower to ensure that appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing RF protective clothing or scheduling work when the stations are at reduced power or shut down.

Finally, it is noted that this technical exhibit only addresses the potential for radio frequency electromagnetic field exposure. All other aspects of the environmental processing analysis will be or already has been provided to the FCC by the tower owner as part of the tower registration process.
