

ENGINEERING TECHNICAL STATEMENT PREPARED BY WILLIAM T. GODFREY OF THE FIRM KESSLER AND GEHMAN ASSOCIATES, INC., TELECOMMUNICATIONS CONSULTING ENGINEERS IN CONNECTION WITH AN AMENDMENT TO THE CITRUS COUNTY ASSOCIATION FOR RETARDED CHILDREN'S (CCARC) DISPLACEMENT RELIEF APPLICATION ON FILE WITH THE FCC (BMPTTA-20020618AAR) FOR AUTHORITY TO MAKE CHANGES IN A CLASS A TELEVISION BROADCAST STATION (FCC FORM 301-CA).

The firm Kessler and Gehman Associates, Inc., has been retained by the Citrus County Association for Retarded Citizens (CCARC), Inc., Inverness, Florida in order to prepare engineering studies and the engineering portion of an amendment to the WYKE-CA displacement relief application on file with the FCC (BMPTTA - 20020618AAR) for authority to make changes in a Class A television broadcast station (FCC Form 301-CA). The WYKE-CA displacement application currently on file with the FCC was accepted for filing two days after the FCC accepted the WFTT-DT minor modification application for filing. The WFTT-DT minor modification parameters were not in the FCC database at the time the WYKE-CA displacement application was being prepared due to the fact that the FCC had just received the WFTT-DT application.

When the FCC placed the WFTT-DT minor modification application on Public Notice in the Daily Digest, we realized that the WFTT-DT application was received prior to the WYKE application, and therefore, the WFTT-DT application had precedence. When we initially performed the Longley-Rice interference studies, we determined that the proposed WYKE-CA Channel 47 facility would cause less than 0.5% interference to the WFTT-DT CP. However, when we noticed that WFTT proposed an increase in ERP from 200 kW non-directional to 1,000 kW directional, we were concerned and ran new studies. The new studies verified that the proposed WYKE-CA Channel 47 facility would cause a predicted 0.7% interference to the WFTT-DT minor modification application. Obviously, 0.7% interference is 0.2% above the authorized rounding tolerance. The CCARC decided to pursue an acceptance letter from WFTT but after weeks of delays without giving any idea of whether they would consider an acceptance letter, the CCARC decided it was time to move on and file an amendment application. Therefore, based on the fact that the WFTT-DT minor modification application was received by the FCC prior to the WYKE-CA displacement application and based on the fact that the WYKE-CA displacement application currently on file with the FCC would cause 0.2% interference above the allowable rounding tolerance percentage to the WFTT-DT minor modification application, the CCARC is filing this amendment to the WYKE-CA Channel 47+ application currently on file with the FCC in order to have a clean and file-acceptable application.

The CCARC is licensed to operate WYKE-LP on UHF, analog Channel 49 (no offset) with an ERP of 19.5 kW (horizontal) at an antenna height radiation center of 87.0 meters above average terrain in the vicinity of Crystal River, FL. The CCARC also has a construction permit ("CP") to build WYKE-LP on UHF, analog Channel 48 (zero offset) with an ERP of 20.2kW (horizontal) at an antenna height R/C of 87.0 meters AAT in the vicinity of Crystal River, FL. Please be advised that the CCARC does not plan to build the Channel 48 CP due to the fact that it will also be displaced by a DTV station. Therefore, the CH 48 CP should be dropped.

The CCARC submitted a Channel 26+ displacement relief application simultaneously with a Class A application on January 16, 2001. Since then, WYKE has been granted Class A status and the Channel 26+ displacement application has been granted a construction permit. Unfortunately, it has been discovered that the azimuth pattern submitted in the CH 26+ displacement application was rotated

approximately 230° more than desired and it has also been discovered that the Channel 26+ Class A station is predicted to receive 3% interference from the WVEN-TV Channel 26 (co-channel) Daytona Beach CP facility. Therefore, not only would the WYKE-CA CH 26+ facility lose a significant service population due to the fact that the main beam would be oriented over the ocean at 248° rather than over the desired area of interest at 030°, they would also experience an additional 3% reduction to their service population from the interference predicted to be received from the WVEN co-channel facility. The main beam cannot simply be rotated to the desired orientation because it would result in unacceptable interference to the WVEN-TV facility.

Initially, we performed studies to prepare a Class A application for WYKE and we determined that the licensed WYKE-LP Channel 49 facility would be displaced when the WVEN-DT (formerly WNTO-DT) facility went digital. We also determined that the WYKE-LP Channel 48 Construction Permit would be displaced when WOPX-DT and WFXU-DT constructed their digital stations. We performed interference studies ranging from in-core channels 2 through 51 and determined that the best channel available at the licensed site location is analog channel 47+. The proposed CH 47+ facility would not have its site within the protected contour of a co-channel or first adjacent channel TV broadcast station but the ratio in dB of its field strength to that of the WTEV-TV CH 47- broadcast station at the protected contour fails to meet the requirements specified in §74.705 of the FCC Rules. Therefore, as depicted in §74.705 of the FCC Rules, we are requesting a waiver of the interference protection rules. Terrain shielding and Longley-Rice terrain dependent propagation prediction methods demonstrated that the proposed facility would not cause unacceptable interference to the WTEV-TV CH 47- broadcast station, or any other station for that matter (See Exhibit 13).

Exhibit 12 is a LPTV study which identifies all stations that the proposed WYKE-CA CH 47+ facility would be short-spaced with. As you can see, the study results established that the proposed WYKE-CA CH 47+ facility would be short-spaced with the WFTT-DT CP CH 47 and the WTEV-TV CH 47 facilities. Since it was determined that short-spacing did exist, we performed a Longley-Rice study using a Sun Microsystems SPARC 5 computer work station loaded with the FCC's TV Interference and Spacing Analysis software (See Exhibit 13).

Exhibit 13 depicts the detailed Longley-Rice interference studies. As you can see, the proposed WYKE-CA Channel 47+ does not cause more than 0.4% interference to any station. The Low Power TV Study indicated that short-spacings existed with WFTT-DT and WTEV-TV. Apparently, at some point in time WBHS changed call signs to WFTT and as a result, the Low Power TV Studies reflect the WFTT call sign and the Longley-Rice studies reflect the WBHS and WFTT call signs. This is not a problem though because the true parameters are used regardless of call sign. As you can see by viewing the Longley-Rice studies exhibit, the proposed WYKE-CA is predicted to cause no more than 0.4% interference to WBHS/WFTT. The FCC Rules state that Class A station interference cannot decrease population in the DTV service area by more than 0.5%, therefore, the proposed WYKE-CA Channel 47+ facility complies with the Class A protection to DTV Rules with respect to WBHS/WFTT.

The Low Power TV Study also indicated that the proposed WYKE-CA CH 47+ facility would be short-spaced with WTEV-TV. Again, referring to the Longley-Rice exhibits, you can see that proposed WYKE-CA CH 47+ facility is predicted to cause 0.0% interference to the licensed WTEV-TV facility. Therefore, in accordance with the FCC's alternate protection means using terrain shielding and Longley-Rice, the proposed WYKE-CA CH 47+ facility complies with the NTSC TV protection from Class A TV rules.

The FCC Form 301-CA Certification section requires the following: a) Exhibit 4 explanation of Analog TV broadcast station protection; b) Exhibit 5 explanation of Digital TV station and DTV Table of Allotments protection; c) Exhibit 6 explanation of Low Power TV, TV translator, Class A, and Digital Class A station protection; d) Exhibit 7 explanation of Land mobile station protection; and e) Exhibit 8 explanation of Environmental Protection Act. The Longley-Rice studies (Exhibit 13) address the aforementioned exhibits 4 through 6 and 8. This engineering technical statement along with Exhibit 14 addresses the aforementioned Exhibit 7 (Land Mobile Protection). This engineering technical statement addresses the aforementioned Exhibit 8 (Environmental Protection Act).

Exhibit 14 is dedicated for the “Land mobile station protection” as per 47 C.F.R. §73.6020. Refer to Exhibit 14 for the Land Mobile Control Transmitter Locations. As you can see, the closest transmitter location to the proposed WYKE-CA Channel 47+ is in Miami, FL, which is approximately 414.9 km away. Therefore, the proposed WYKE-CA Channel 47+ does not cause interference to any applicable Land Mobile stations.

Attached Figures

The following list is an index of enclosed figures produced by calculations and engineering studies of the proposed WYKE-CA Channel 47+.

- 1) Exhibit 1 – Engineering Specifications
- 2) Exhibit 2 – Antenna Data
- 3) Exhibit 3 – Support Structure View (Tower Drawing)
- 4) Exhibit 4 – Azimuth Pattern
- 5) Exhibit 5 – Azimuth Pattern Tabulation
- 6) Exhibit 6 – Elevation Pattern (-2 to 5 degrees)
- 7) Exhibit 7 – Elevation Pattern (-10 to 90 degrees)
- 8) Exhibit 8 – Elevation Pattern Tabulation
- 9) Exhibit 9 – ERP/dBk Pattern
- 10) Exhibit 10 – Site Plotted on TOPO Map
- 11) Exhibit 11 – FCC Service Contour Plotted for WYKE-CA CH 47+
- 12) Exhibit 12 – Low Power TV Studies
- 13) Exhibit 13 – Longley-Rice Interference Studies (WYKE-CA Channel 47+ Interference Studies
(Pertains to Exhibits 4 – 6 in FCC Form 301-CA / Exhibits 1 -3 in Form 301-CA are not applicable for engineering).
- 14) Exhibit 14 – Land mobile station protection

Environmental Impact

The proposed construction will have no significant environmental impact as defined in §1.1307 of the FCC Rules. The transmitter, transmission line and antenna system will produce an ERP of 50.0 kW. Assuming that the maximum lobe of radiation is oriented at the base of the tower for WYKE-CA, it will produce a power density six feet above the ground of 0.094mW/cm^2 . This is only 4.22% of the maximum permissible exposure (MPE) authorized by the American National Standards Institute (ANSI). Since the proposed operation of WYKE-CA Channel 47+ would not exceed 5.0% of the MPE limit for population/uncontrolled at any point on the ground, WYKE-CA would not be considered a “significant

contributor" to the RF exposure environment pursuant to OET Bulletin 65, Edition 97-01. Therefore, contributions of exposure from other sources were not accounted for in this analysis. It is safe to conclude that the emissions will be insignificant and well within the maximum allowable requirements. If other antennas are placed on the tower in the future, the applicant will cooperate with those users by reducing or completely terminating the power to the antenna when maintenance workers are in danger from the electromagnetic radiation emanating from the antenna. The tower will be enclosed within a fence with warning signs posted at the locked gate.

Certification

The applicant accepts full responsibility for the elimination of any objectionable interference including that caused by intermodulation to facilities in existence or authorized prior to the grant of this application.

This technical statement was prepared by William T. Godfrey, Telecommunications Consultant with Kessler and Gehman Associates, Inc. having offices in Gainesville, Florida and has been working in the field of radio and television broadcast consulting since 1998. He graduated from the University of North Florida with a Bachelor of Arts degree in Criminal Justice and a minor in Mathematics and received a Commission in the Aviation Branch of the United States Army in 1993. As a Professional in the field of Telecommunications and as a Captain in the United States Army, he states under penalty of perjury that the information contained in this report is true and correct to the best of his knowledge and belief.

ENGINEERING SPECIFICATIONS

A. Transmitter Site:

Geographic coordinates:

North Latitude	28° 52' 55"
West Longitude	82° 31' 30"

Transmitter Site Address: **1315 N. Van Nortwick Rd.**
Lecanto, FL 34461

B. Main Studio Location: **4.7 miles ESE of Crystal River**

C. Proposed Facility:

NTSC Channel	Number 47
	Frequency 668-674 MHz

D. Antenna Height:

Height of Site Above Mean Sea Level (AMSL).....	15.8 M
Overall Height of Structure Above Ground..... (including all appurtenances)	93.3 M
Overall Height of Structure Above Mean Sea Level..... (including all appurtenances)	109.1 M
Height of Site Above Average Terrain	1.0 M
Antenna Height Radiation Center (R/C) Above Ground	88.2 M
Antenna Height R/C Above Mean Sea Level	104.0 M
Average of All Non-Odd Radials.....	18.0 M
Antenna Height R/C Above Average Terrain	86.0 M

E. System Parameters – Circular Polarization:

Transmitter Power Required	2.22 kW
Maximum Power Input to Antenna	1.64 kW
Total System Loss	1.30 dB
Transmission Line Efficiency	74.1%
Maximum Antenna Gain in Beam Maximum	14.83 dB
Maximum Antenna Gain in Horizontal Plane	14.79 dB
Maximum Effective Radiated Power	16.99 dBk
In Beam Maximum	50.0 kW
Maximum Effective Radiated Power	16.95 dBk
In Horizontal Plane	49.5 kW

FINISHED FINISHED FINISHED FINISHED FINISHED FINISHED

PART 22--PUBLIC MOBILE SERVICES--Table of Contents

Subpart E--Paging and Radiotelephone Service

Sec. 22.625 Transmitter locations.

This section governs where point-to-multipoint transmitters on the channels listed in Sec. 22.621 may be located.

(a) 928-960 MHz. In this frequency range, the required minimum distance separation between co-channel fixed transmitters is 113 kilometers (70 miles). However, this requirement may be waived if the applicant submits an engineering analysis that shows that no interference would be caused to either system. In such a case, a developmental authorization may be issued (see Sec. 22.415). If no interference is experienced during the term of the developmental authorization, the licensee may apply for a regular authorization.

(b) 470-512 MHz. The purpose of the rule in paragraph (b)(1) of this section is to define the areas in which the 470-512 MHz channels are allocated for public mobile use. The purpose of the rules in paragraphs (b)(2) and (b)(3) of this section is to reduce the likelihood that interference to television reception from public mobile operations on these channels will occur.

(1) Control transmitter locations. Control transmitter locations must be within 80 kilometers (50 miles) of the designated locations in this paragraph.
