

# EXHIBIT 11

## NARRATIVE

This application is for authority to construct a new translator located near **Stephenville, Texas**, NAD 27 coordinates **N 32 11 49, W 98 13 49**. FCC Public Notice **DA 03-2095** dated June 30, 2003 listed those applications that are "singleton" from the results of the filing window of March 10, 2003 through March 17, 2003. This "singleton" application, file number **BNPFT 20030317JOY** is listed in Attachment A of DA 03-2095.

This application meets all requirements of C.F.R. 47 Section 74.1204.

**Exhibit 12.0** is the study list for channel 300.

The study list shows the Community of License as Gun Barrel City, Texas. This was not noticed until after it was filed and listed as a "singleton". The correct Community is Morgan Hill, Texas. Due to a site problem for Morgan Hill, this application is to move this proposed translator to Stephenville, Texas.

**Exhibit 12.1** is a showing of the proposed channel 300, 40-dBu interference contour to the 60-dBu protected contours of station KEYJFM channel 300.

**Exhibit 12.2** is a showing of the proposed channel 300, 40-dBu interference contour to the K300-X channel 300, 60-dBu protected contour and K300-X, 40-dBu interference contour to the proposed channel 300 protected 60-dBu contour.

**Exhibit 12.3** is a showing that current location of the translator labeled as OLD CH 300 in the exhibit, which is listed incorrectly as Gun Barrel City. Its protected 60-dBu contour does overlap the new proposed channel 300 protected 60-dBu contour for Stephenville.

This application meets all requirements of 47 C.F.R. Section 74.1205 as the output channel is above the cutoff for channel 6 issues and EPA requirements under 47 C.F.R. Section 1.1306. This proposal does not have a significant environmental impact and does comply with RF exposure limits.
