

EXHIBIT 12

Page #1, Waiver Request of Section 74.1204

Lexington, SC New-T 10Watts ERP

Calvary Chapel of Twin Falls, Inc. 7/03

The proposed site is contained entirely inside the service contours of second-adjacent station WWDM, Sumter, SC.

WWDM

The proposed site is contained entirely inside the service contour of second-adjacent Station WWDM, Channel 267, Class C, 100 kW, Sumter, SC. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent station WWDM least arriving protected F(50,50) signal at the proposed transmitter site is 69-dBu,. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to WWDM least contour is 109-dBu (free-space contour method employed). This means that the 109-dBu interfering signal would, in the worst case at the maximum radial, extend 80 meters from the center of radiation, which is proposed at 90 meters AGL. This tower site is not located in a highly populated area and a Topo Map is submitted showing there are no buildings tall enough to reach the interference area surrounding this tower. Since there is no population within the 109-dBu interference contour, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station WWDM.
