

TECHNICAL STATEMENT  
RADIO MULTIPLE OWNERSHIP ANALYSIS  
CAPSTAR TX LIMITED PARTNERSHIP  
23 JANUARY 2004

This statement and the attached figures were prepared on behalf of Capstar TX Limited Partnership. (“CTLP”), a licensee subsidiary of Clear Channel Communications, Inc. (CC). CTLP proposes to modify the facilities of KJQY (FM). A multiple ownership analysis was prepared considering the following radio stations under present or proposed common ownership or time brokerage (co-owned):

Table 1: Proposed Commonly Owned or Controlled Stations Studied

Call Sign	Facility_id	City	State	Status
KCSJ	53846	PUEBLO	CO	LIC
KGHF	53850	PUEBLO	CO	LIC
KVUU	35868	PUEBLO	CO	LIC
KCCY	40847	PUEBLO	CO	LIC
KDZA-FM	40848	PUEBLO	CO	LIC
KDZA-FM	40848	PUEBLO	CO	APP
KJQY	87658	ROCKY FORD	CO	LIC
KJQY-mod	87658	ROCKY FORD	CO	PRP

Since certain of these stations have overlapping principal community contours (5 mV/m for AM stations, 3.16 mV/m for FM stations), an ownership study has been prepared in accordance with the Federal Communications Commission’s multiple ownership rules.

There are no other principal community coverage contours controlled or proposed to be controlled by CC that overlap or intersect the principal community coverage contour of the proposed facility of KJQY (FM).

Radio Markets

The “radio market” applicable to common ownership of the subject stations is defined as the area encompassed by the mutually overlapping principal community contours of the proposed commonly owned stations. The predicted principal community contours of all the stations studied herein (as tabulated in *Table 1* above), are shown in *Figure 1*. These mutually overlapping contours form one “radio markets” for analysis under the Commission’s rules.

## Count of Stations in Defined Markets

The number of radio stations in a “radio market” is determined by counting the operating, commercial stations having principal community contours which overlap or intersect the principal community contours which define the radio market, plus the subject co-owned stations.

In “radio market” as studied herein, there are at least 16 radio stations, **not** including the subject co-owned stations, which overlap or intersect with the defined “radio market.”

*Figure 2 and Table 2* are a tabulation of some of the radio stations identified in “radio market”.

Only known licensed, operating commercial stations were included in this tabulation. Distances to contours for AM stations were predicted using the antenna patterns as identified in the Commission’s AM database and the appropriate Ground Wave Field Strength versus Distance Graph of 47 C.F.R. Section 73.184. Ground conductivities were obtained from FCC Figure M3. Distances to the FM contours were determined based on the method of 47 C.F.R. Section 73.313. Terrain data was derived from the N.G.D.C. 30 second computer database for each of the FM stations using radials spaced every 10 degrees of azimuth.

Based on the above, it is concluded that the proposed modifications comply with Section 73.3555(a) of the FCC Rules.

Sincerely,

Troy G. Langham  
FCC Engineering Specialist  
Clear Channel Communications, Inc
