COMPREHENSIVE TECHNICAL EXHIBIT

APPLICATION FOR CONSTRUCTION PERMIT
KIJR-LP, Facility ID 14152, Lucerne Valley, CA
FCC File Number BLTTL-20050916ACW
Birach Broadcasting Corporation

Application for Flash Cut to Digital Operation. The within application's purpose is to convert currently licensed (aKIJR-LP to digital operation at the same site on the same channel, using the existing antenna.

Use of unregistered antenna structure. Applicant proposes, as in the underlying license, to use a short tower at an established antenna site. The tower does not extend more than 15 meters above ground level at the site; per TOWAIR study, registration is not required.

Interference Study. A standard Longley-Rice interference study was run for the instant proposal and found to be in compliance with applicable portions of §74.793 with reference to all facilities with the exception of one pending application for NEW LPTV facility, discussed following.

Conflicting Application. That application is BNPDTL-20090828AAT, filed by Hosannah Apostolic Ministries Broadcasting Corporation. It is a cochannel application proposed to be located less than 8 km distant. It was filed August, 2009, long after the grant of the License which underlies the within application.

BNPDTL-20090828AAT unacceptable per §74.793(a) and (h) at the time of its filing. Inasmuch as the engineering documentation accompanying that application was inaccurate, the application was - at the time of its filing - *Mutually Exclusive* with an existing cochannel license just 8 km distant and could not therefore be granted. The Hosannah application and the the KIJR-LP licensed facility are predicted to experience massive mutual interference.

Accordingly, it is respectfully requested that the within application be considered with regard to the foregoing information and granted.
