MULTIPLE OWNERSHIP SERVICE CONTOUR ANALYSIS

**Prepared for
South Sound Broadcasting, LLC
April 2005**

The attached analysis of compliance with the radio multiple ownership rules was prepared in accordance with the Rules and Regulations of the Federal Communications Commission, in connection with a minor change application for station KFMY(FM) (Facility ID #51167).

Rated Market Analysis

The only attributable station with which the proposed KFMY Oakville facility has principal community contour overlap is KAYO(FM) Channel 257C Elma. Both stations are listed by BIA as "home" to the Seattle-Tacoma Arbitron Metro.

In order to qualify for common ownership of this 2FM cluster, there must be at least four stations in the relevant market. The attached BIA market definition indicates that there are 73 stations in the Seattle-Tacoma market. (FM station KMIH is also included in the BIA material, but is a Class D secondary station.)

Unrated Market Analysis

For the sake of a complete record, since neither Elma nor Oakdale is located within the Seattle-Tacoma Arbitron Metro, an ownership analysis has been made consistent with the Commission's interim rules for unrated markets. The 70 dBu contours of FM stations were determined from the technical data contained in the most recent edition of the FCC FM Database. The listed antenna

Hatfield & Dawson Consulting Engineers

height above average terrain was used together with topographic data obtained from the digitized 30 second or 3 second database. The 5 mV/m daytime contours of AM stations were determined from the technical data contained in the most recent edition of the FCC AM Database. The listed antenna parameter information was used together with a digitized version of the FCC M-3 or Region II ground conductivity database.

The service contours were plotted using correct map projection mathematics. Those stations whose transmitter sites are within the respective principal community service contours of the stations proposed to be commonly owned have only the sites rather than their contours shown. All contours and enclosed transmitter site locations have been labeled. A list of all stations considered is included with this statement.

In counting stations providing service to the "market" defined by each of the discrete clusters formed in unrated markets, stations whose transmitter sites are located in excess of 92 km from the perimeter of the common overlap area have been excluded, as have other stations to be commonly-owned but which do not have overlap with the discrete cluster being studied.

This exhibit evidences at least the minimum number of stations necessary to demonstrate compliance with the rules concerning radio multiple ownership in unrated markets. In order to qualify for common ownership of this 2FM cluster, there must be at least four stations in the relevant "market". This study demonstrates that there are at least 11 stations in the relevant market.

April 8, 2005

A handwritten signature in black ink, appearing to read "Erik C. Swanson". The signature is fluid and cursive, with the first name "Erik" and last name "Swanson" clearly distinguishable.

Erik C. Swanson
