

EXHIBIT 11

The purpose of this minor change application is to change the K254AD translator output frequency to channel 251, 98.1 MHz. No other changes are requested. This frequency change is necessary since FM station KRVC, located 30.8 km from the K254AD translator, is now operating on channel 255C2, the first adjacent channel to the K254AD translator. No reports have been received claiming interference to KRVC from the existing licensed K254AD but the Applicant believes it is prudent to make this frequency change to prevent any such interference and protect the KRVC primary coverage area.

EXHIBIT 12

The proposed frequency change will not cause any prohibited interfering contour overlap with the protected 60 dBu contours of any existing licensed FM service, FM translator or FCC construction permit.
