

TECHNICAL EXHIBIT
AMENDMENT FOR LICENSE APPLICATION
RADIO STATION KRCL(FM)
SALT LAKE CITY, UTAH

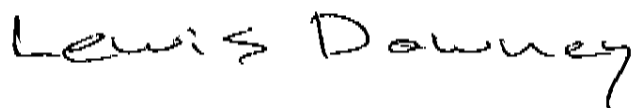

TECHNICAL NARRATIVE

This technical exhibit amends the license application for noncommercial Station KRCL(FM) Salt Lake City, Utah to provide additional information regarding concerns from an FCC inspection conducted by Jerry Ulcek of the Denver field office in the spring of 2001. This inspection imposed four requirements which Listeners Community Radio of Utah, licensee of KRCL, Bonneville Communications (the site owner) and other users of the site have completed. The requirements were:

1. Post additional RF warning signs on all sides of property and access road to site.
2. Attend RF safety training course on Occupational Exposure Guidelines (OEG).
3. Install warning lights on all auxiliary antenna towers indicating when the auxiliary antenna is energized.
4. Agree to reduce power or cease operations as necessary to protect persons having access to the site.

All of these requirements have now been completed.

Lewis Downey

Technical Director of Engineering
