

Addendum to Exhibit A (Compliance with CFR 74.1204)

The proposed FM Translator is located within the protected 60 dBu contour of second adjacent channel station WZRK, channel 298A, Fort Shawnee, OH. The predicted F(50-50) field strength of WZRK at the proposed translator site is 89.2 dBu, see Exhibit 12A. Therefore, the respective predicted interfering contour generated by the proposed FM Translator is 129.2 dBu. This interfering contour extends less than 13 meters from the proposed transmit antenna, and the area of overlap does not reach the ground.

A picture of the proposed tower is attached to this exhibit which clearly indicates there are no structures within the 13 meter interfering aperture (the antenna is to be mounted at 51 meters on the tower).

Therefore, EMF respectfully requests a waiver of C.F.R. 74.1204 based on no population within the area of predicted interference.
