WFFC constructed the new directional antenna according to the restrictions listed in the Construction Permit issued by the FCC and Specifications from the antenna manufacturer, Dielectric.

The antenna was side mounted on a uniform cross-section guyed tower. The physical dimensions are on record with the antenna manufacturer and are the ones used in modeling the antenna pattern. The antenna was assembled and erected according to instructions issued by the antenna manufacturer.

There are no other antennas or platforms mounted within the vertical or horizontal level limits specified by the manufacturer.

The antenna azimuth was set by a licensed surveyor to the azimuth specified by the antenna manufacturer. A statement from that surveyor is an attachment in this application.

J. Paxton Durham, being duly sworn, deposes and states that he is a qualified and experienced Broadcast Engineer of some 30 years experience. He also states that he is the Chief Engineer of WVTF Public Radio owned by Virginia Tech Foundation, Inc. which also owns WFFC.

A handwritten signature in black ink, appearing to read "J. Paxton Durham". The signature is written in a cursive style and is positioned above a horizontal line.
